# *IOT Solutions*

# IOT Main Concept

The implementation of smart services may implies the:

- ♣ acquisition of data from the field
- ♣ computation and imposition of actions/values
- ♣ Save of historical values, computer data analytics, etc.

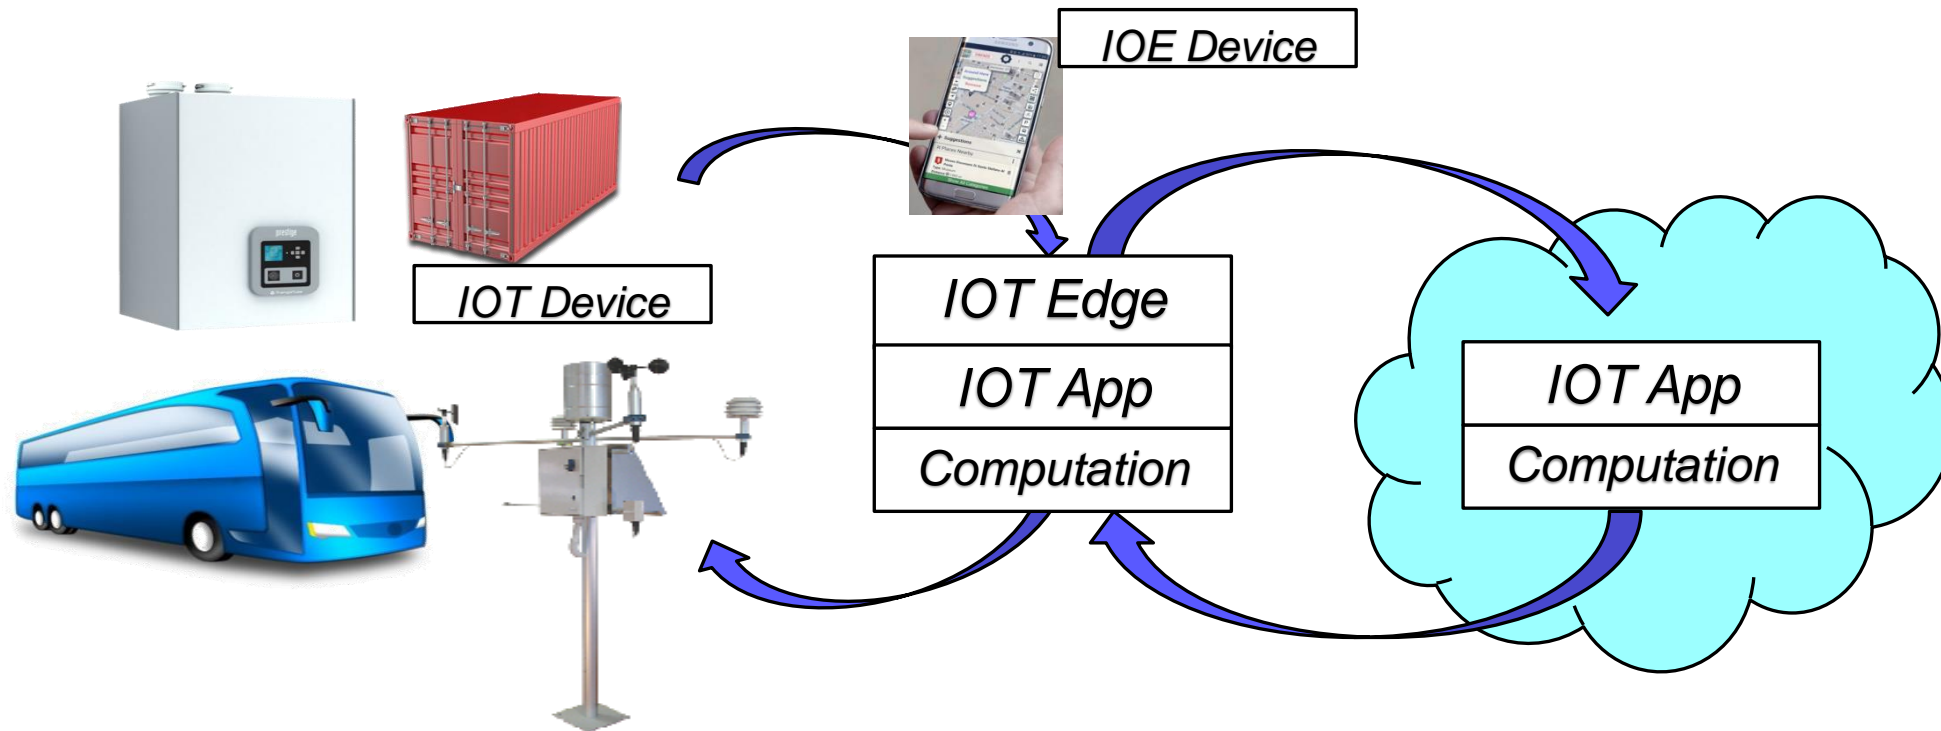

# IOT Main Concept

The implementation of smart services may implies the:

- ♣ acquisition of data from the field
- ♣ computation and imposition of actions/values
- ♣ Save of historical values, computer data analytics, etc.

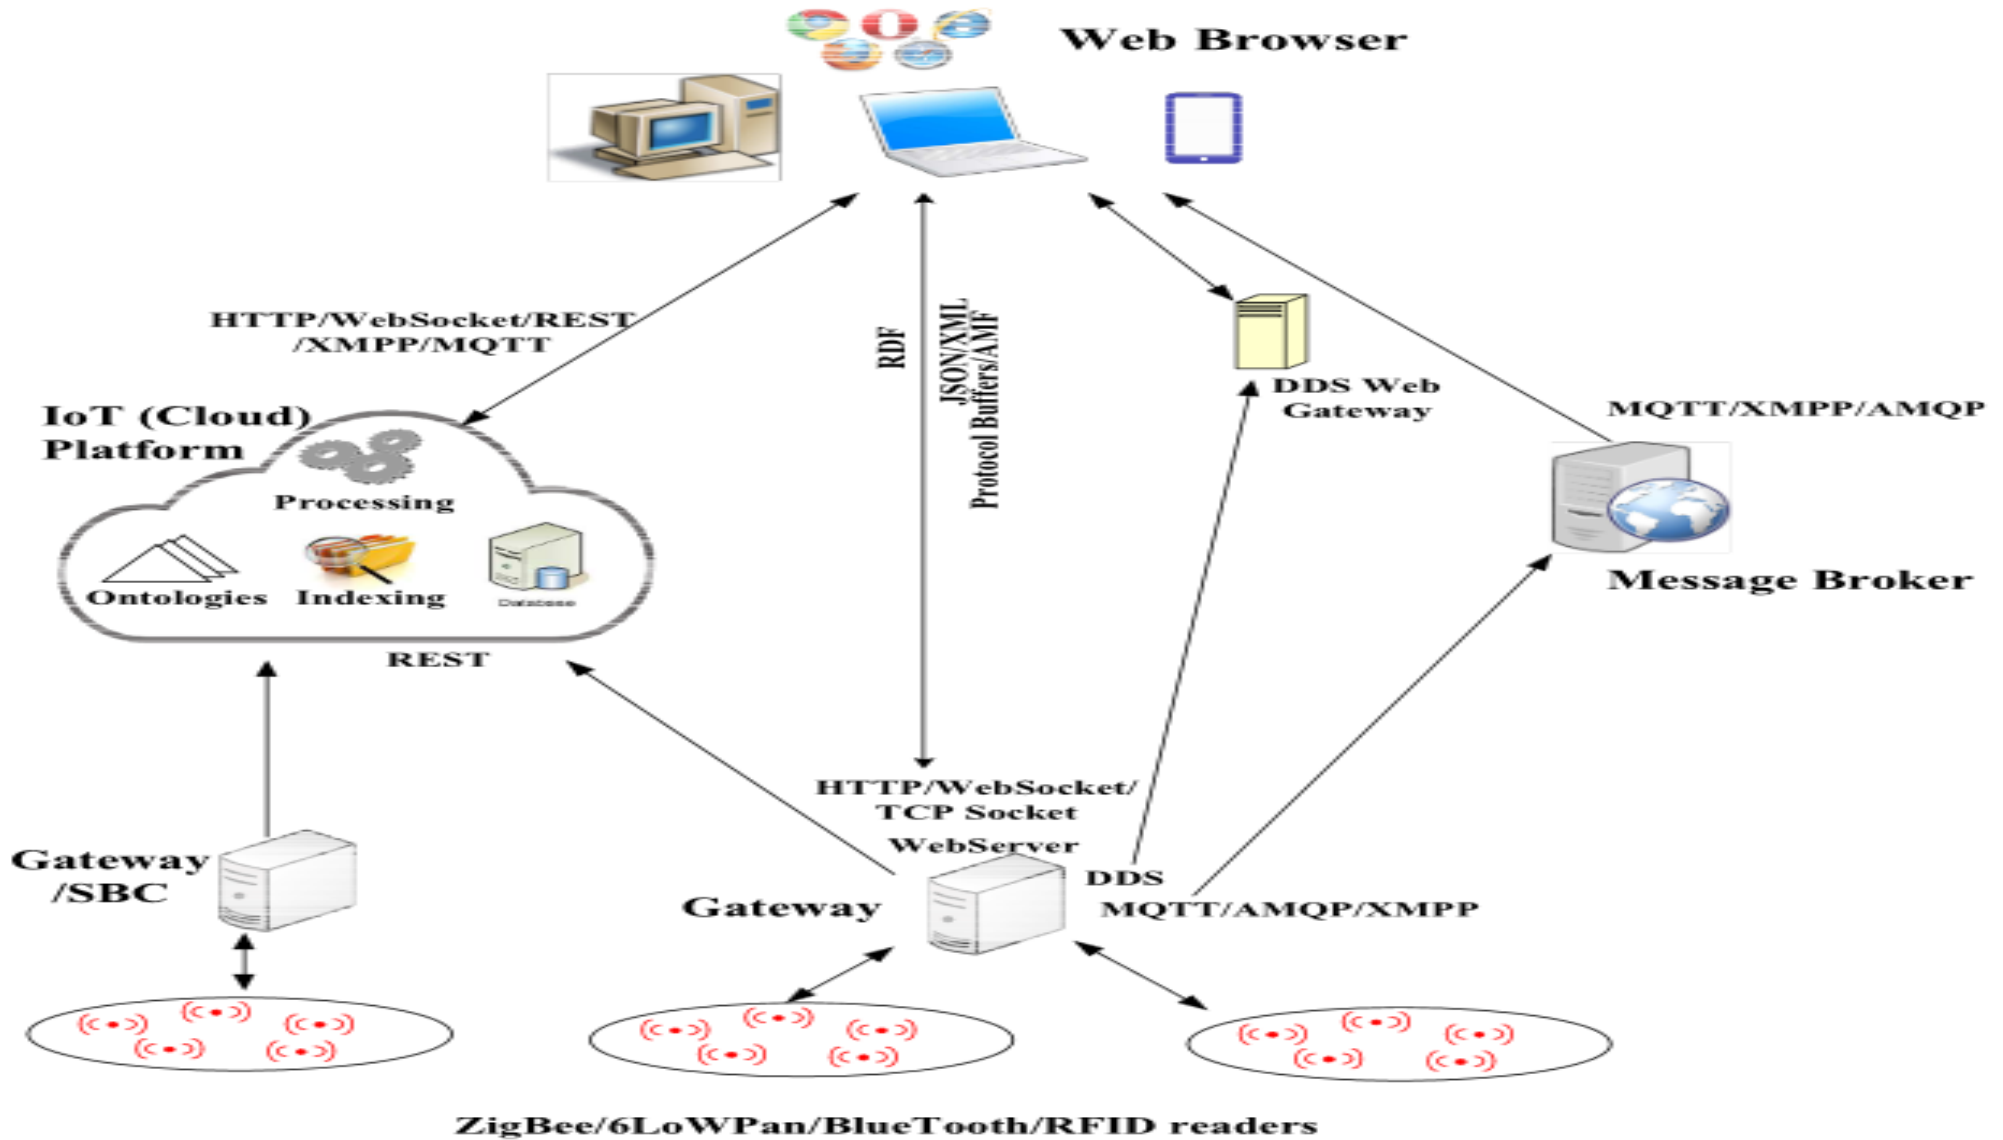

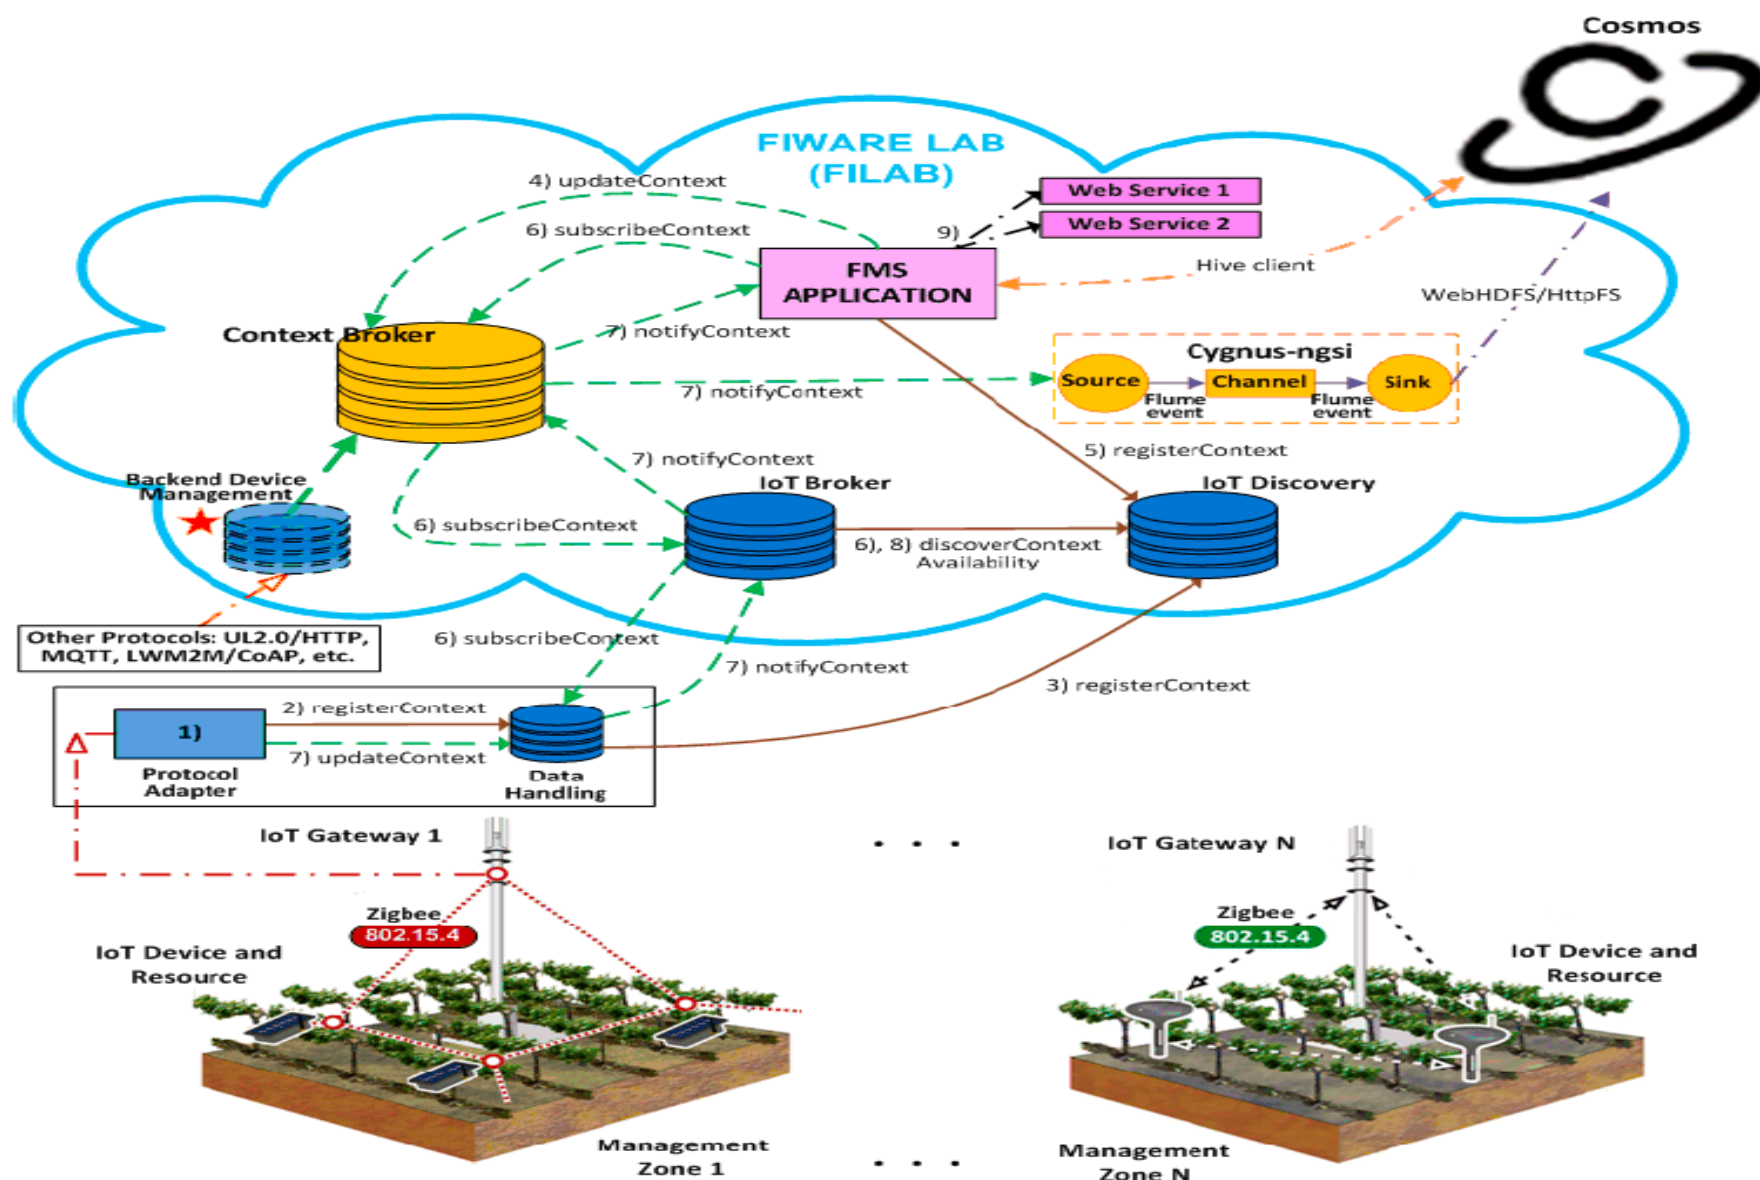

# Cloud vs Fog/Edge Computing

# Edge Computing, Fog Computing

Other Protocols: UL2.0/HTTP, MQTT, LWM2M/CoAP, etc.

# IOT Context Broker

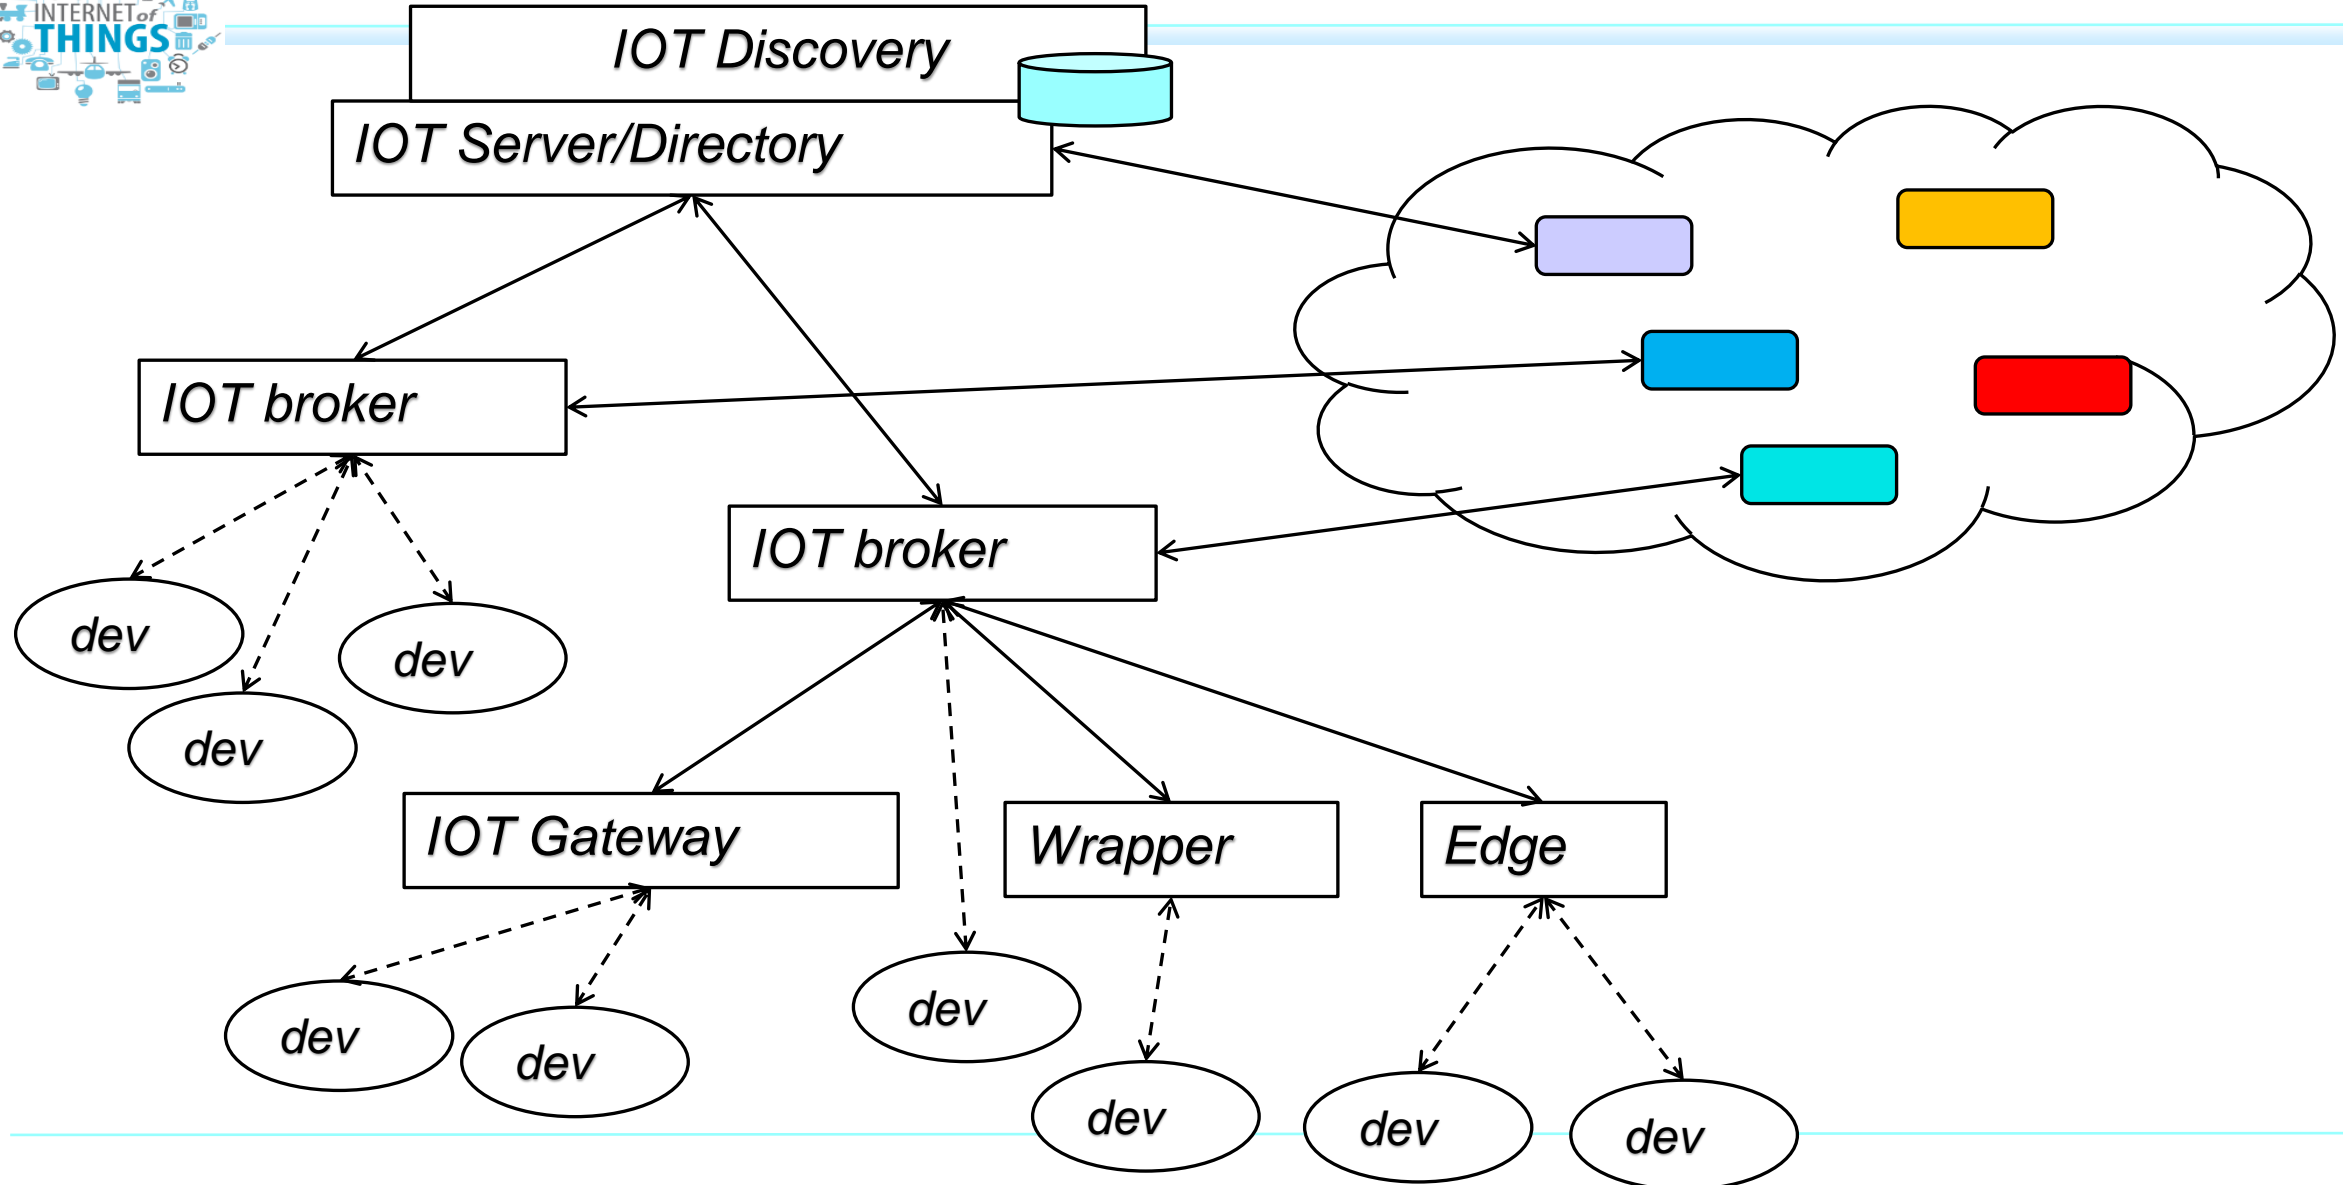

## Context Broker operations: **create** & **pull** data

- Context Producers publish data/context elements by invoking the **update** operations on a Context Broker.
- Context Consumers can retrieve data/context elements by invoking the **query** operations on a Context Broker

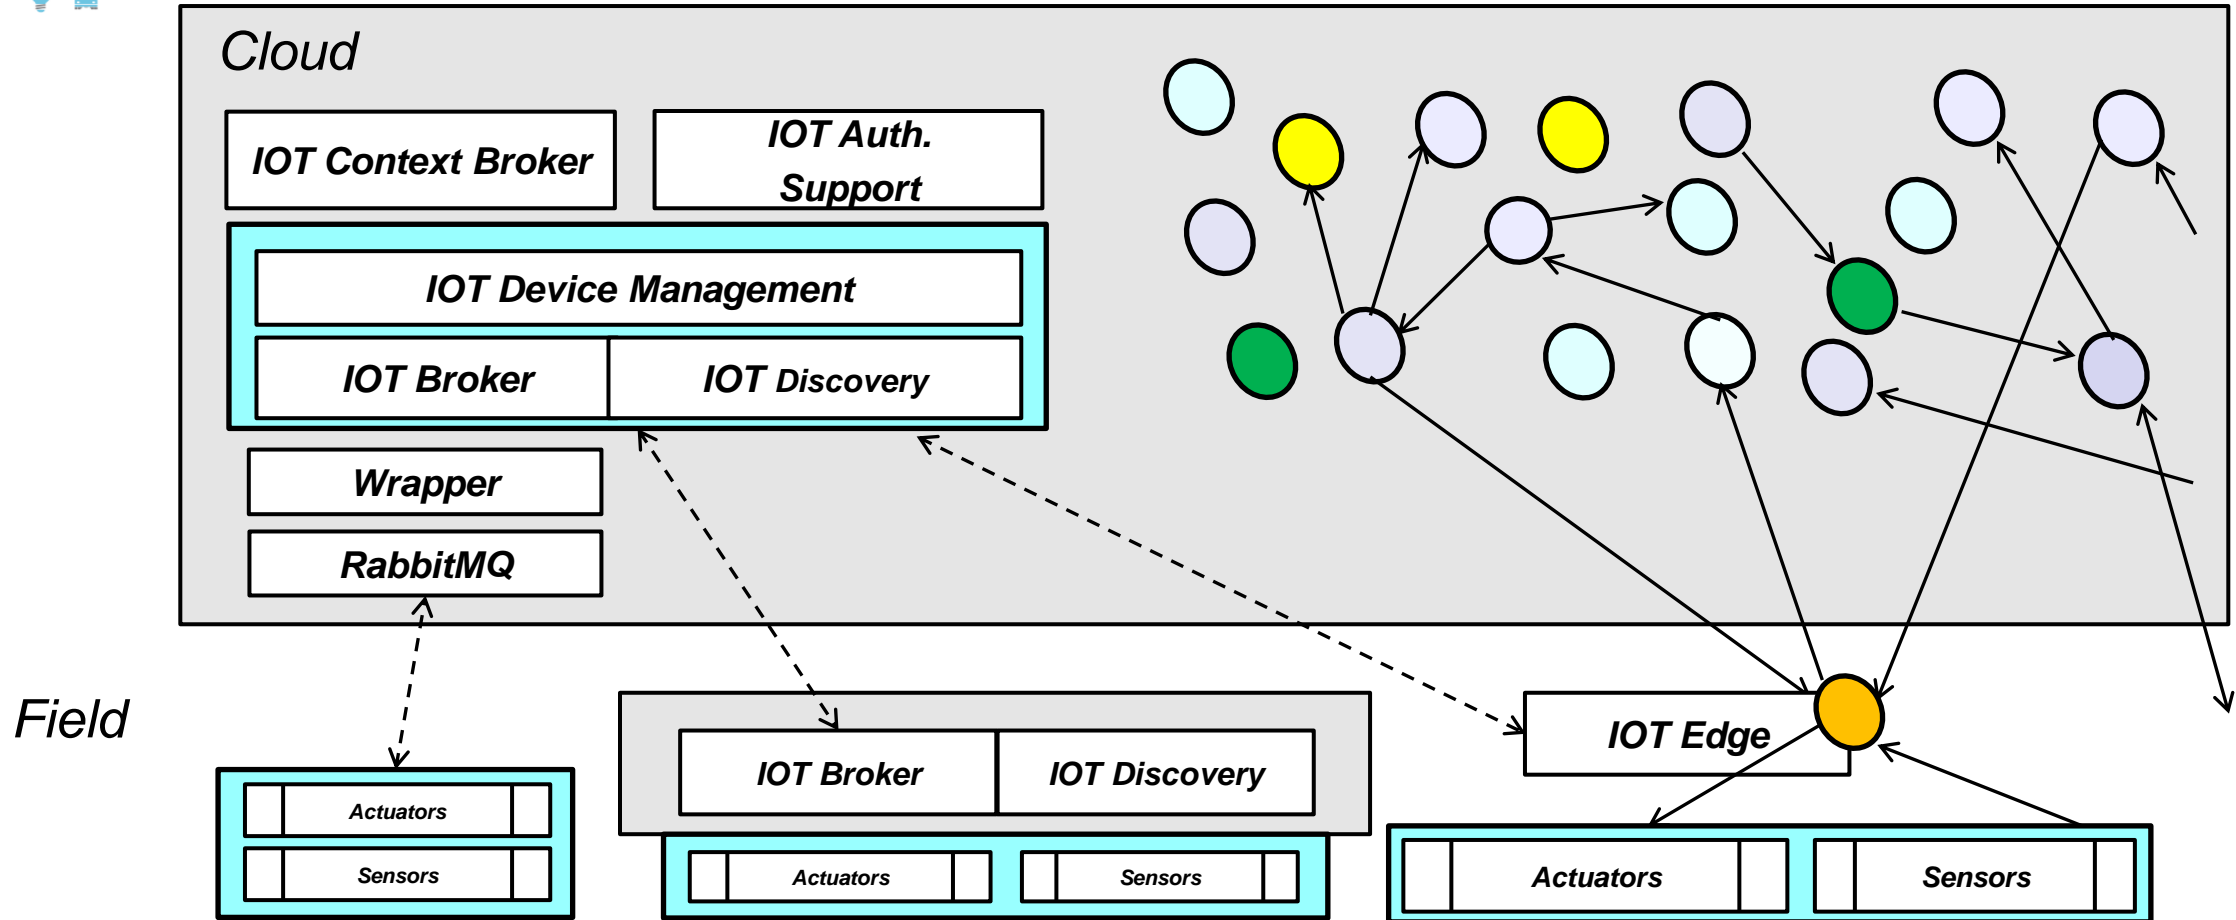

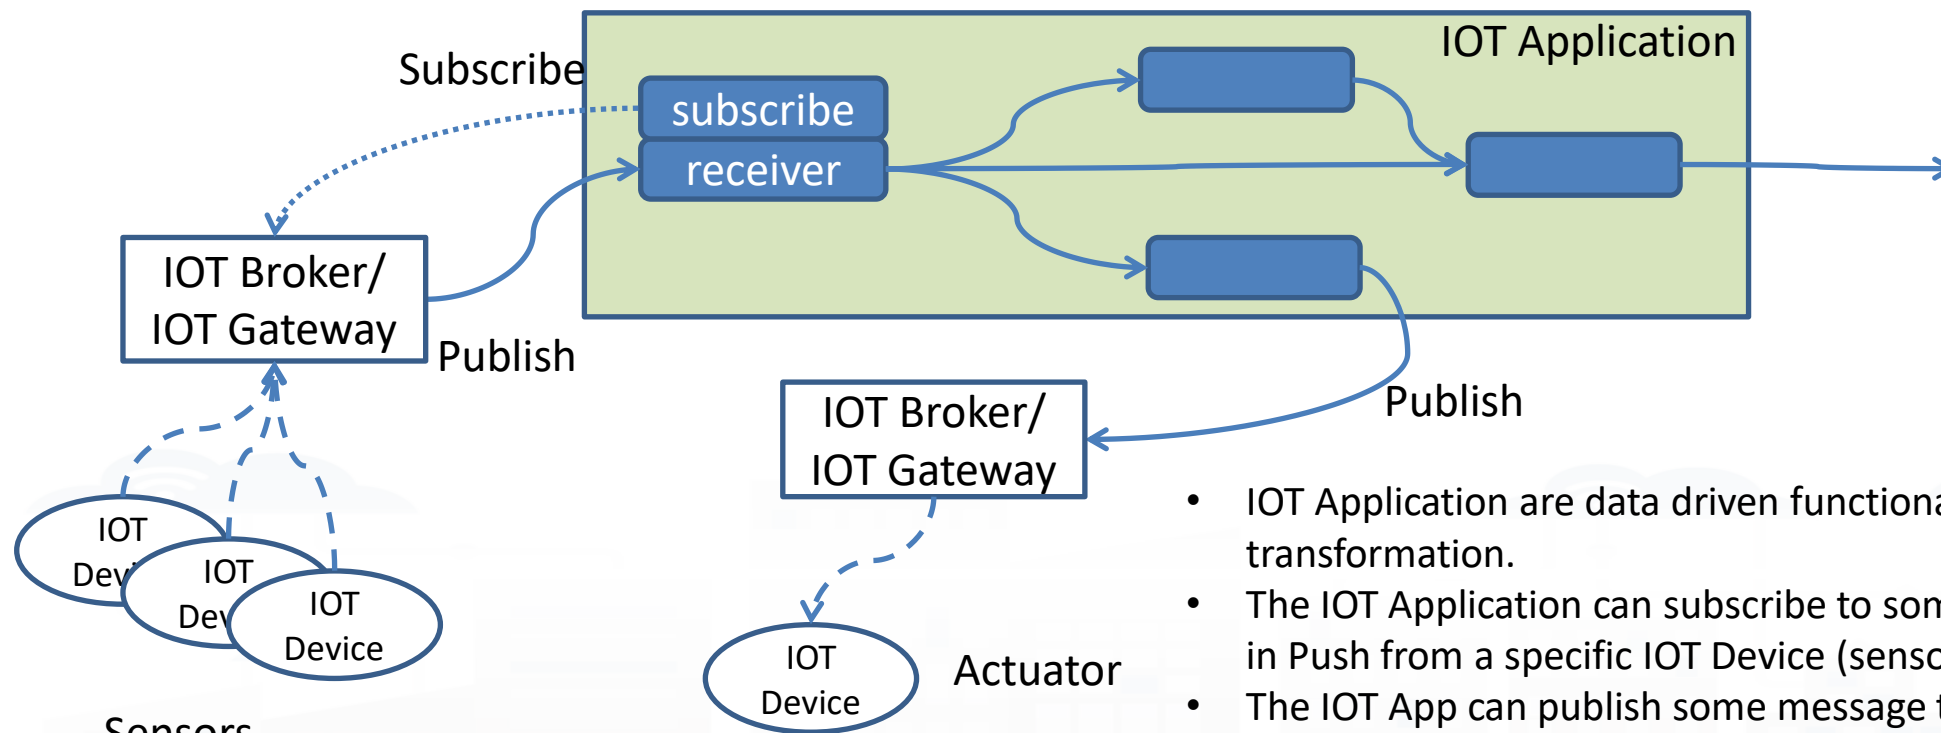

# architettura

# Conceptual architecture

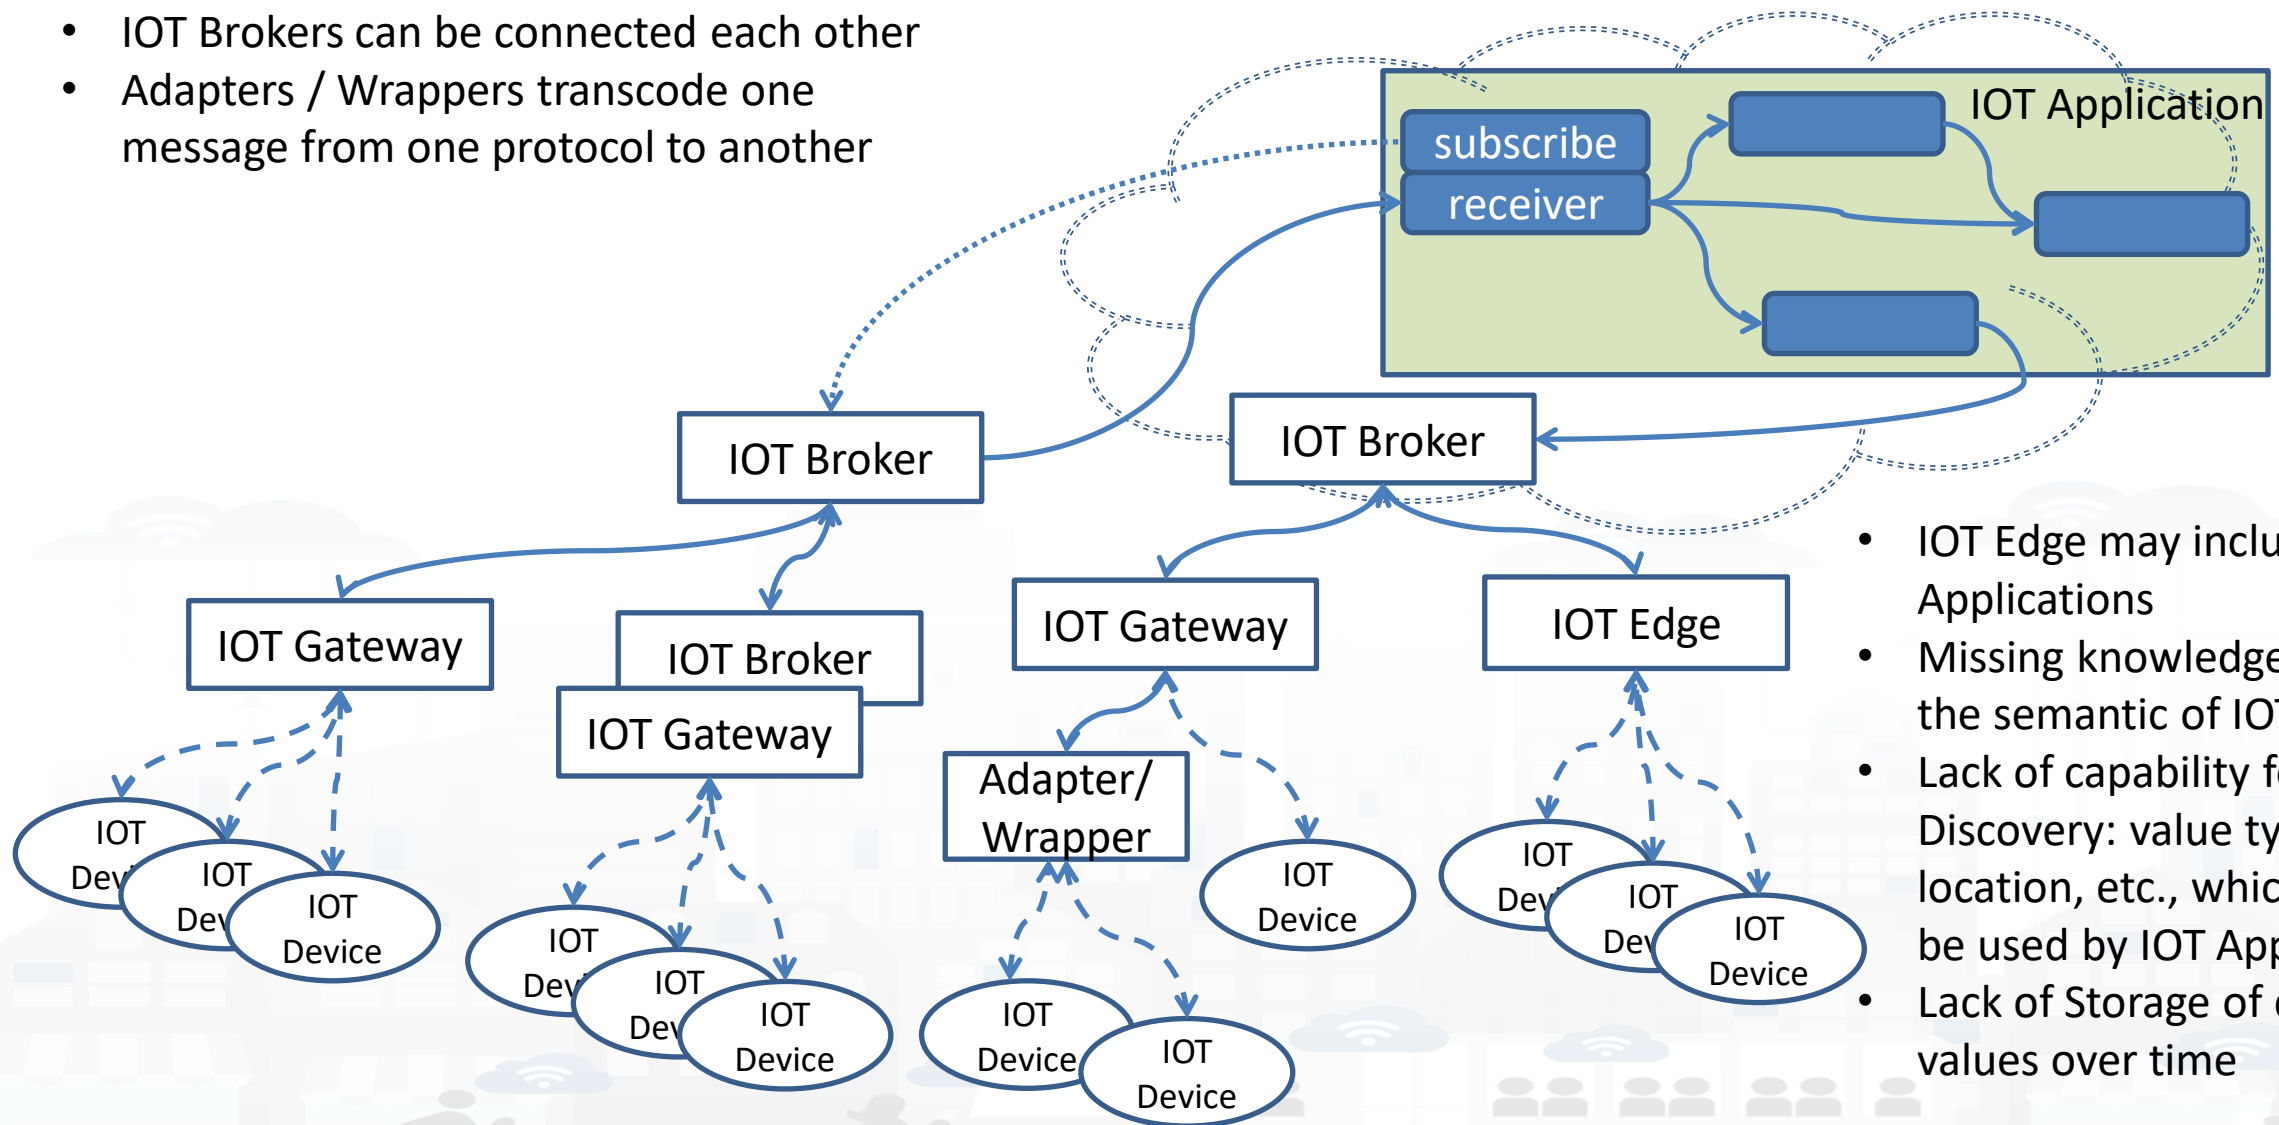

## Sensors

- Sensors are programmed to send data (i) periodically, or (ii) when a relevant change occurs in the sensor value, or (iii) when events occur (for example a change of status of something), etc.
- Actuator perform some action on the field: change of status, reset, turn on something, change setting value, etc.

- IOT Application are data driven functional programs for data transformation.
- The IOT Application can subscribe to some IOT Brokers to receive data in Push from a specific IOT Device (sensor)
- The IOT App can publish some message toward some IOT Device (Actuator), passing via an IOT Broker.
- Continuous lines are messages via TCP/IP
- Dashed lines are message via some radio channel (Lora, BT, Wi-Fi, ...)
- IOT Brokers and IOT Gateway can be distinct servers
- IOT Brokers can be on cloud
- IOT Gateway performs the SW update, the business management, access in Push and Pull

# Definitions

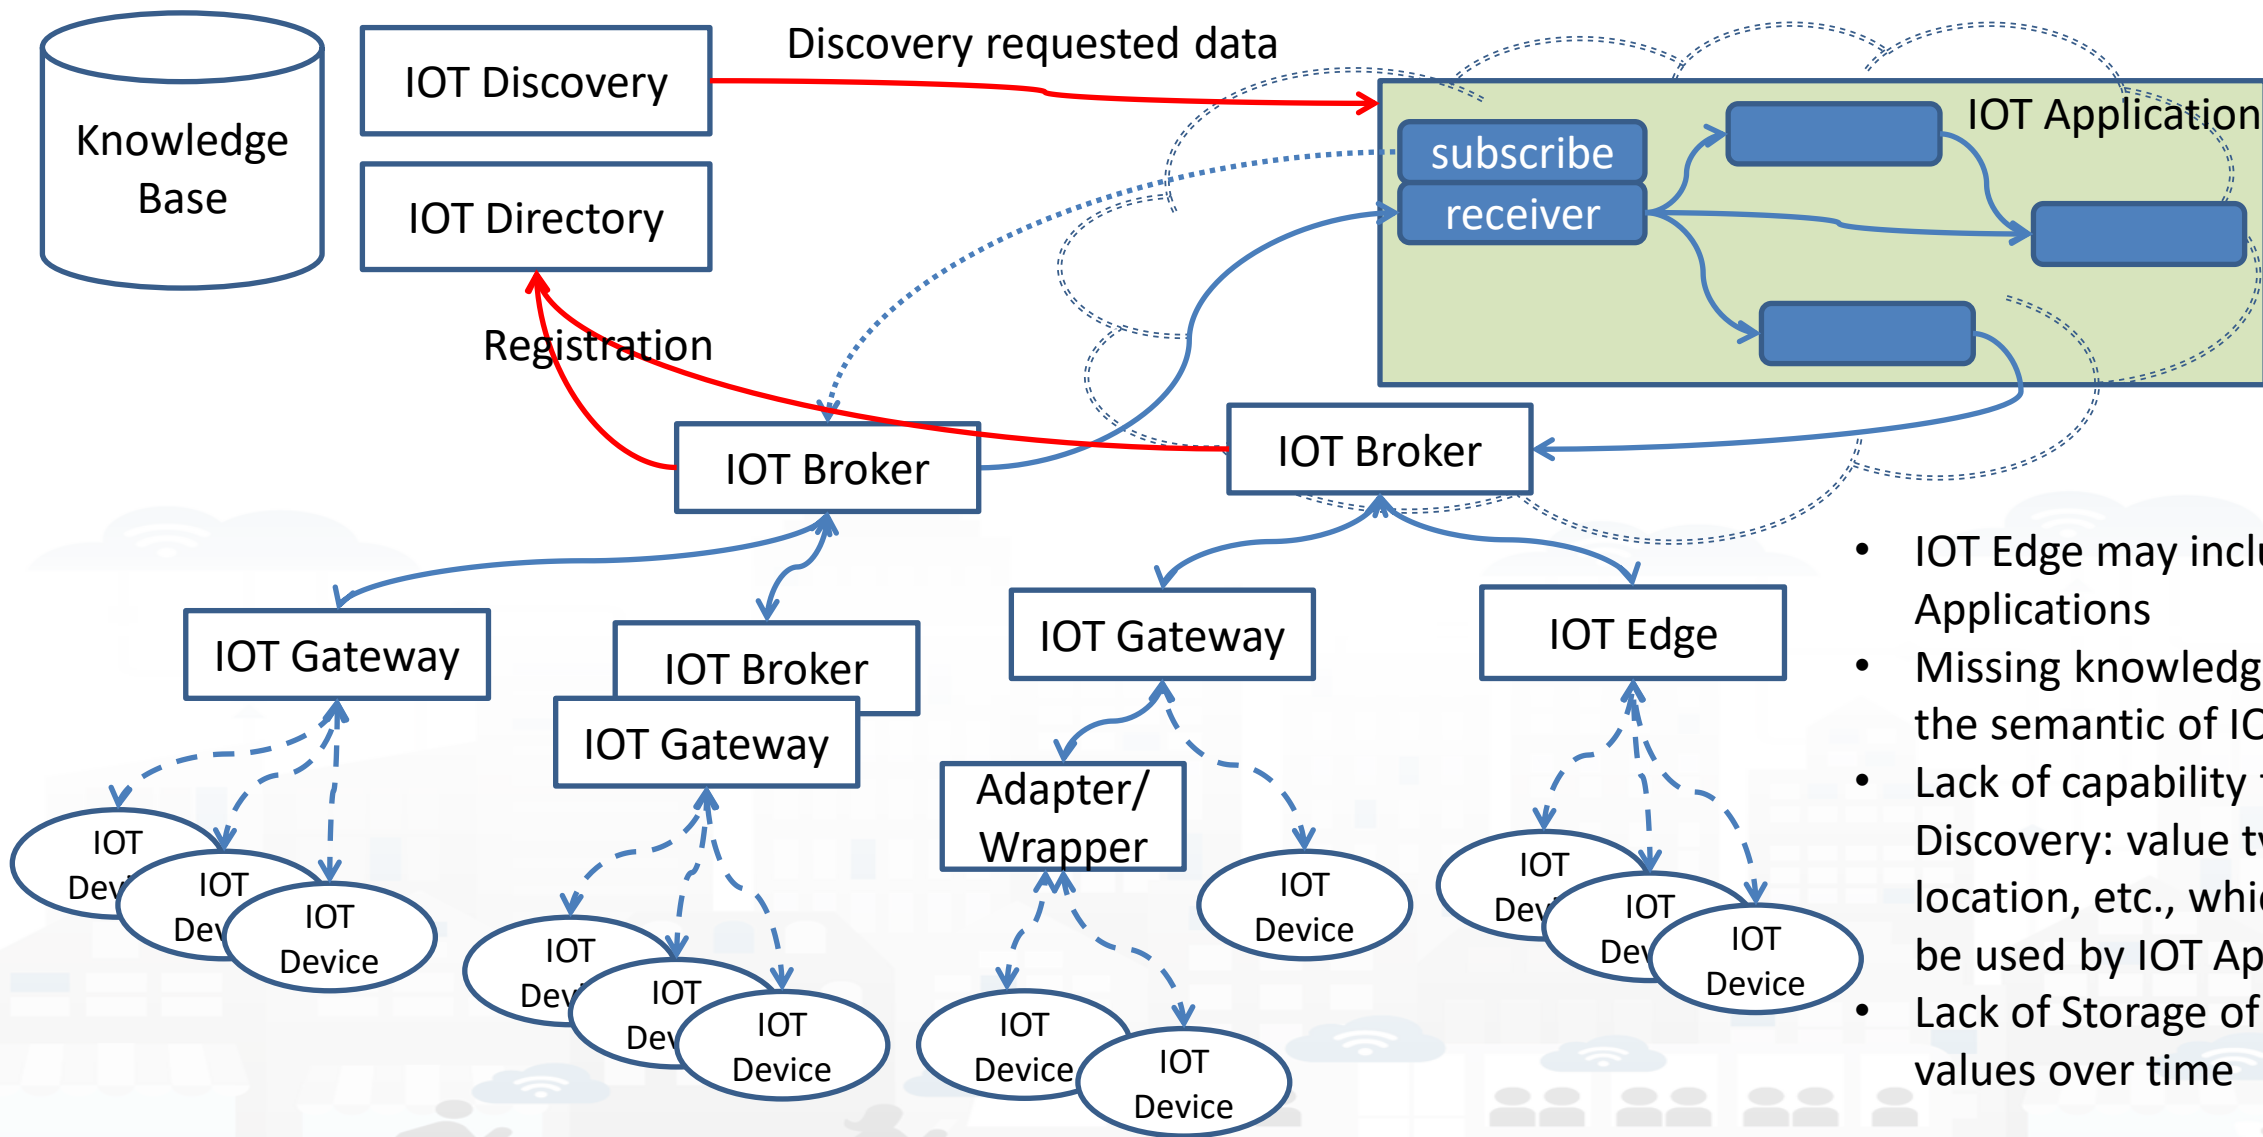

- IOT Brokers can be connected each other
- Adapters / Wrappers transcode one message from one protocol to another

- IOT Edge may include IOT Applications
- Missing knowledge about the semantic of IOT devices
- Lack of capability for IOT Discovery: value type, location, etc., which could be used by IOT App
- Lack of Storage of data values over time

# Definitions

- IOT Edge may include IOT Applications
- Missing knowledge about the semantic of IOT devices
- Lack of capability for IOT Discovery: value type, location, etc., which could be used by IOT App
- Lack of Storage of data values over time

# IOT/IOE Protocols

## Communication Patterns

### Discovery

Discover, register and "thrust" new devices on the network

Registration

### Telemetry

Information Flows From device to another system for conveying status changes in the device

Push

### Inquiries

Requests from devices looking to gather required information or asking to initiate activities

### Commands

Commands from other systems to a device or a group of devices to perform specific activities

Bulk action

### Notifications

Information flows from other systems to a device or a group for conveying status changes in the world

- MQTT
- HTTP(s)
- AMQP
- COAP
- NGSI
- OneM2M
- WebSocket
- S
- .....
- Etc.

# IOT Brokers

	AMQP	STOMP	JMS	COAP	NGSI	MQTT OASIS
<b>RabbitMQ</b>	X	X	X	X		X
<b>Mosquitto</b>						X
<b>ActiveMQ</b>	X	X	X			X
<b>StormMQ</b>	X					
<b>HIVEMQ</b>			X			X
<b>ORION BROKER</b>				X	X	X

# IOT stack protocols

<b>Session</b>		MQTT, SMQTT, CoRE, DDS, AMQP, XMPP, CoAP, ...	<b>Security</b> TCG, Oath 2.0, SMACK, SASL, ISASecure, ace, DTLS, Dice, ...	<b>Management</b> IEEE 1905, IEEE 1451, ...
<b>Network</b>	<b>Encapsulation</b>	6LowPAN, 6TiSCH, 6Lo, Thread, ...		
	<b>Routing</b>	RPL, CORPL, CARP, ...		
<b>Datalink</b>		WiFi, Bluetooth Low Energy, Z-Wave, ZigBee Smart, DECT/ULE, 3G/LTE, NFC, Weightless, HomePlug GP, 802.11ah, 802.15.4e, G.9959, WirelessHART, DASH7, ANT+, LTE-A, LoRaWAN, ...		

[https://www.cse.wustl.edu/~jain/cse570-15/ftp/iot\\_prot/](https://www.cse.wustl.edu/~jain/cse570-15/ftp/iot_prot/)

# IOT Brokers

	AMQP	STOMP	JMS	COAP	NGSI	MQTT OASIS
<b>RabbitMQ</b>	X	X	X	X		X
<b>Mosquitto</b>						X
<b>ActiveMQ</b>	X	X	X			X
<b>StormMQ</b>	X					
<b>HIVEMQ</b>			X			X
<b>ORION BROKER</b>				X	X	X

# Comparison high level IOT protocols

Protocols	UDP/TCP	Architecture	Security and QoS	Header Size (bytes)	Max Length(bytes)
<b>MQTT</b>	TCP	Pub/Sub	Both	2	5
<b>AMQP</b>	TCP	Pub/Sub	Both	8	-
<b>CoAP</b>	UDP	Req/Res	Both	4	20 (typical)
<b>XMPP</b>	TCP	Both	Security	-	-
<b>DDS</b>	TCP/UDP	Pub/Sub	QoS	-	-
<b>NGSI</b>	TCP/IP				

# MQTT: Message Queue Telemetry Transport

- ❑ security obtained with SSL/TLS since it is over TCP
- ❑ ISO/IEC PRF 20922
- ❑ Over TCP/IP, Async, pub/subscribe,
- ❑ payload agnostic (can be encrypted)

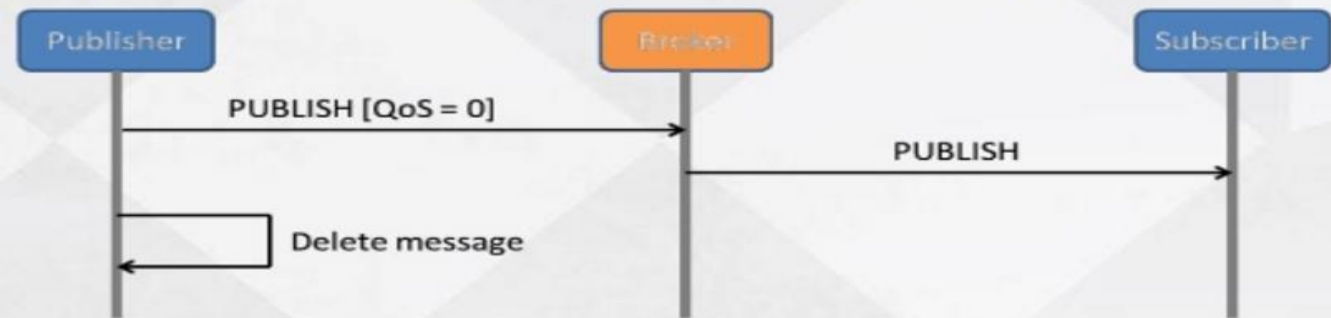

# MQTT QoS

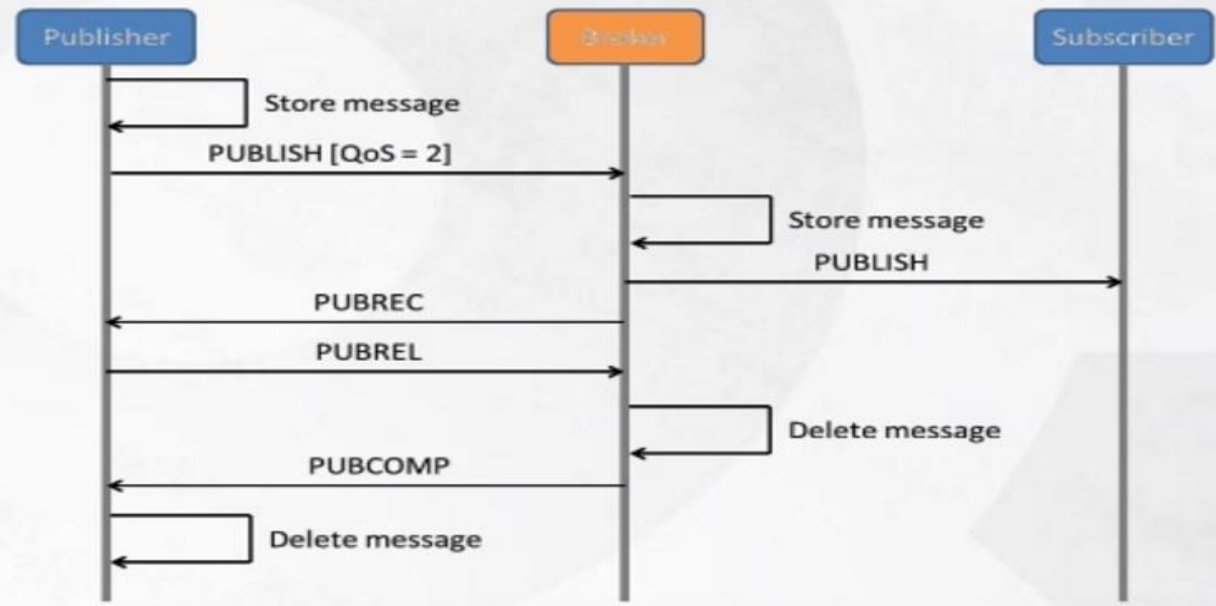

## QoS 0 : At most once (fire and forget)

## QoS 1 : At least once

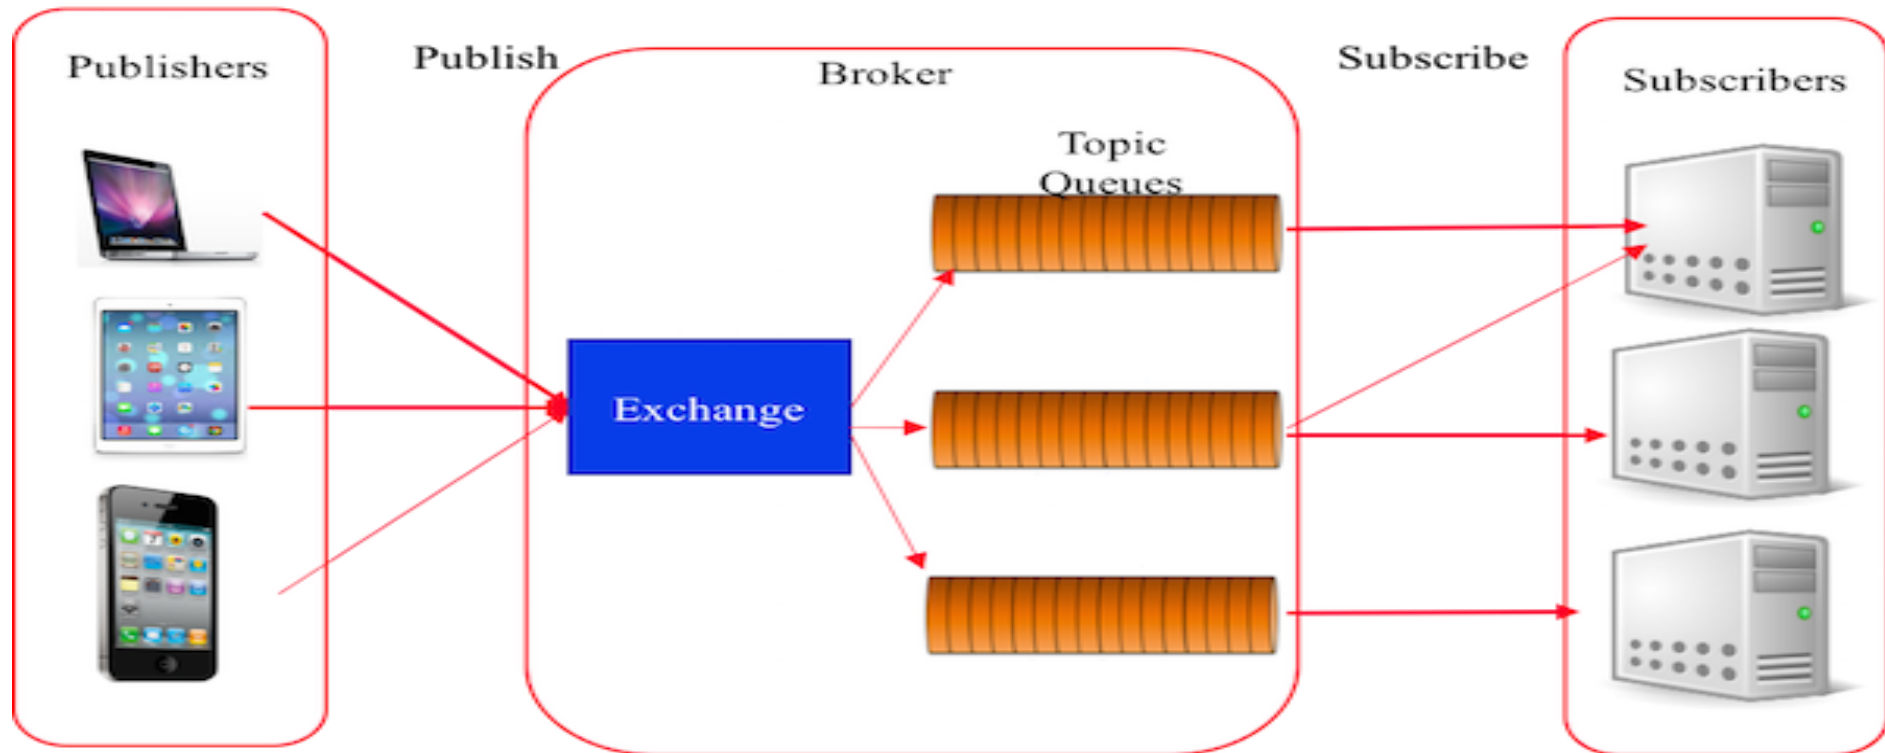

## QoS 2 : Exactly once

# AMQP Advanced Message Queuing Protocol

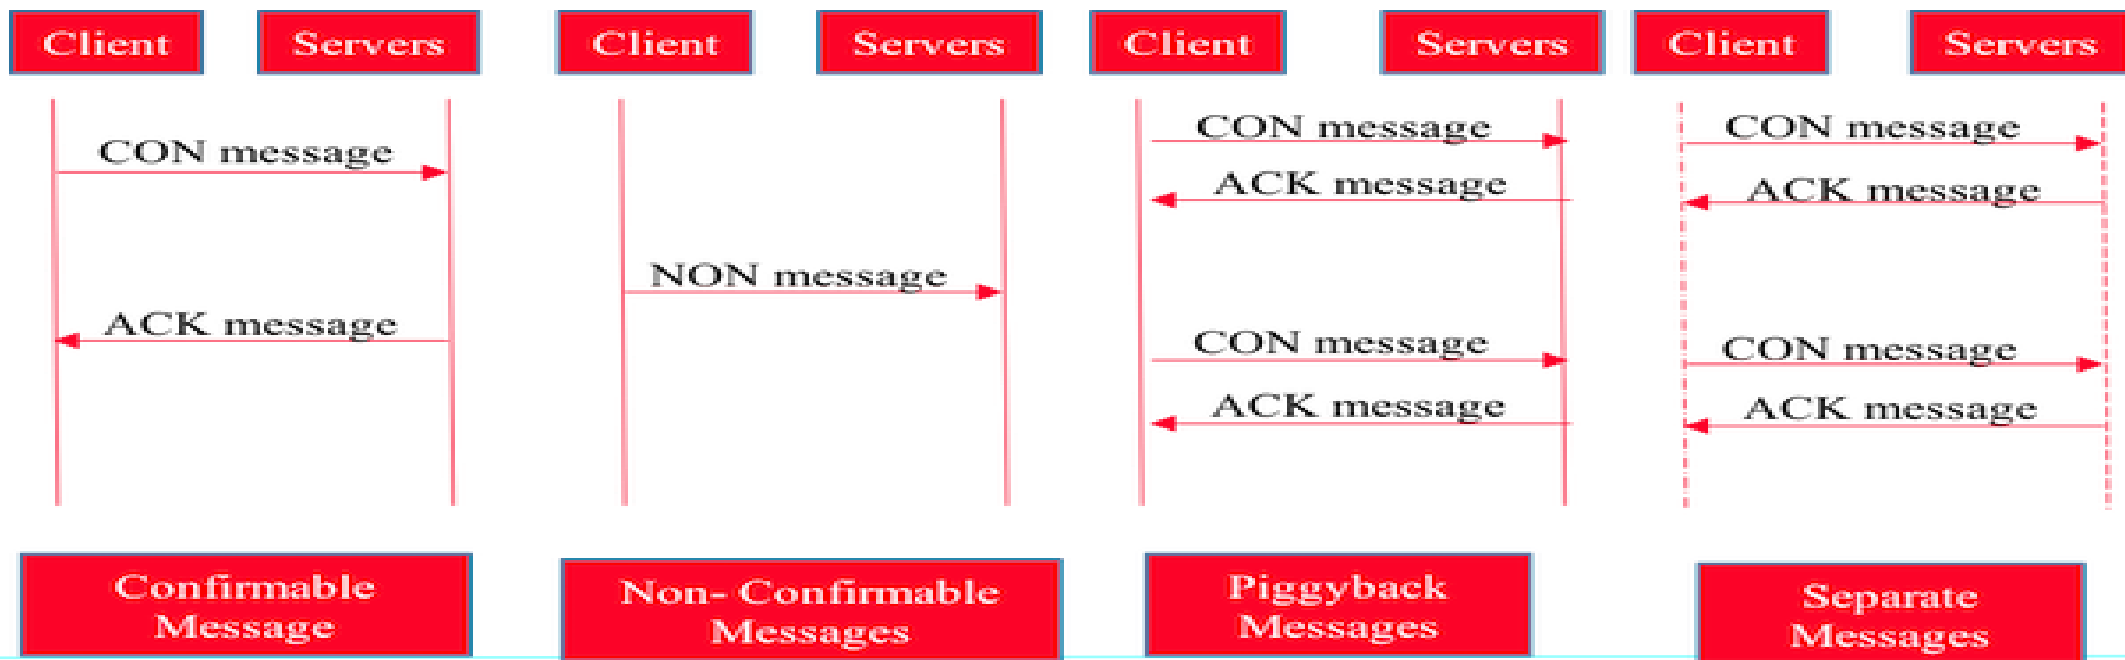

- ❑ Over TCP, binary wire protocol
- ❑ Exchange decoupling

# CoAP: Constrained Application Protocol

- ❑ OMA LWM2M over IETF CoAP (Internet Engineering Task Force)
- ❑ security obtained with DTLS, Datagram TLS
- ❑ HTTP like over UDP with fixed header, no TCP

# Other protocols

- **STOMP**: Streaming Text Oriented Messaging Protocol
  - ♣ Similar to HTTP
- **XMPP**: Extensible Messaging and Presence Protocol
  - ♣ Based on XML, proposed by IETF
  - ♣ Over TCP, can use HTTP
- **WAMP**: Web Application Messaging Protocol
  - ♣ WebSocket protocol by IANA
  - ♣ Over level 6
- **SNMP** by IETF, level 7
  - ♣ Over UDP, or IP
  - ♣ Monitoring status of servers
- **SigFOX**
- **OneM2M** AIOTI
  - ♣ a strategic enabler for IoT applications and companies developing IoT solutions

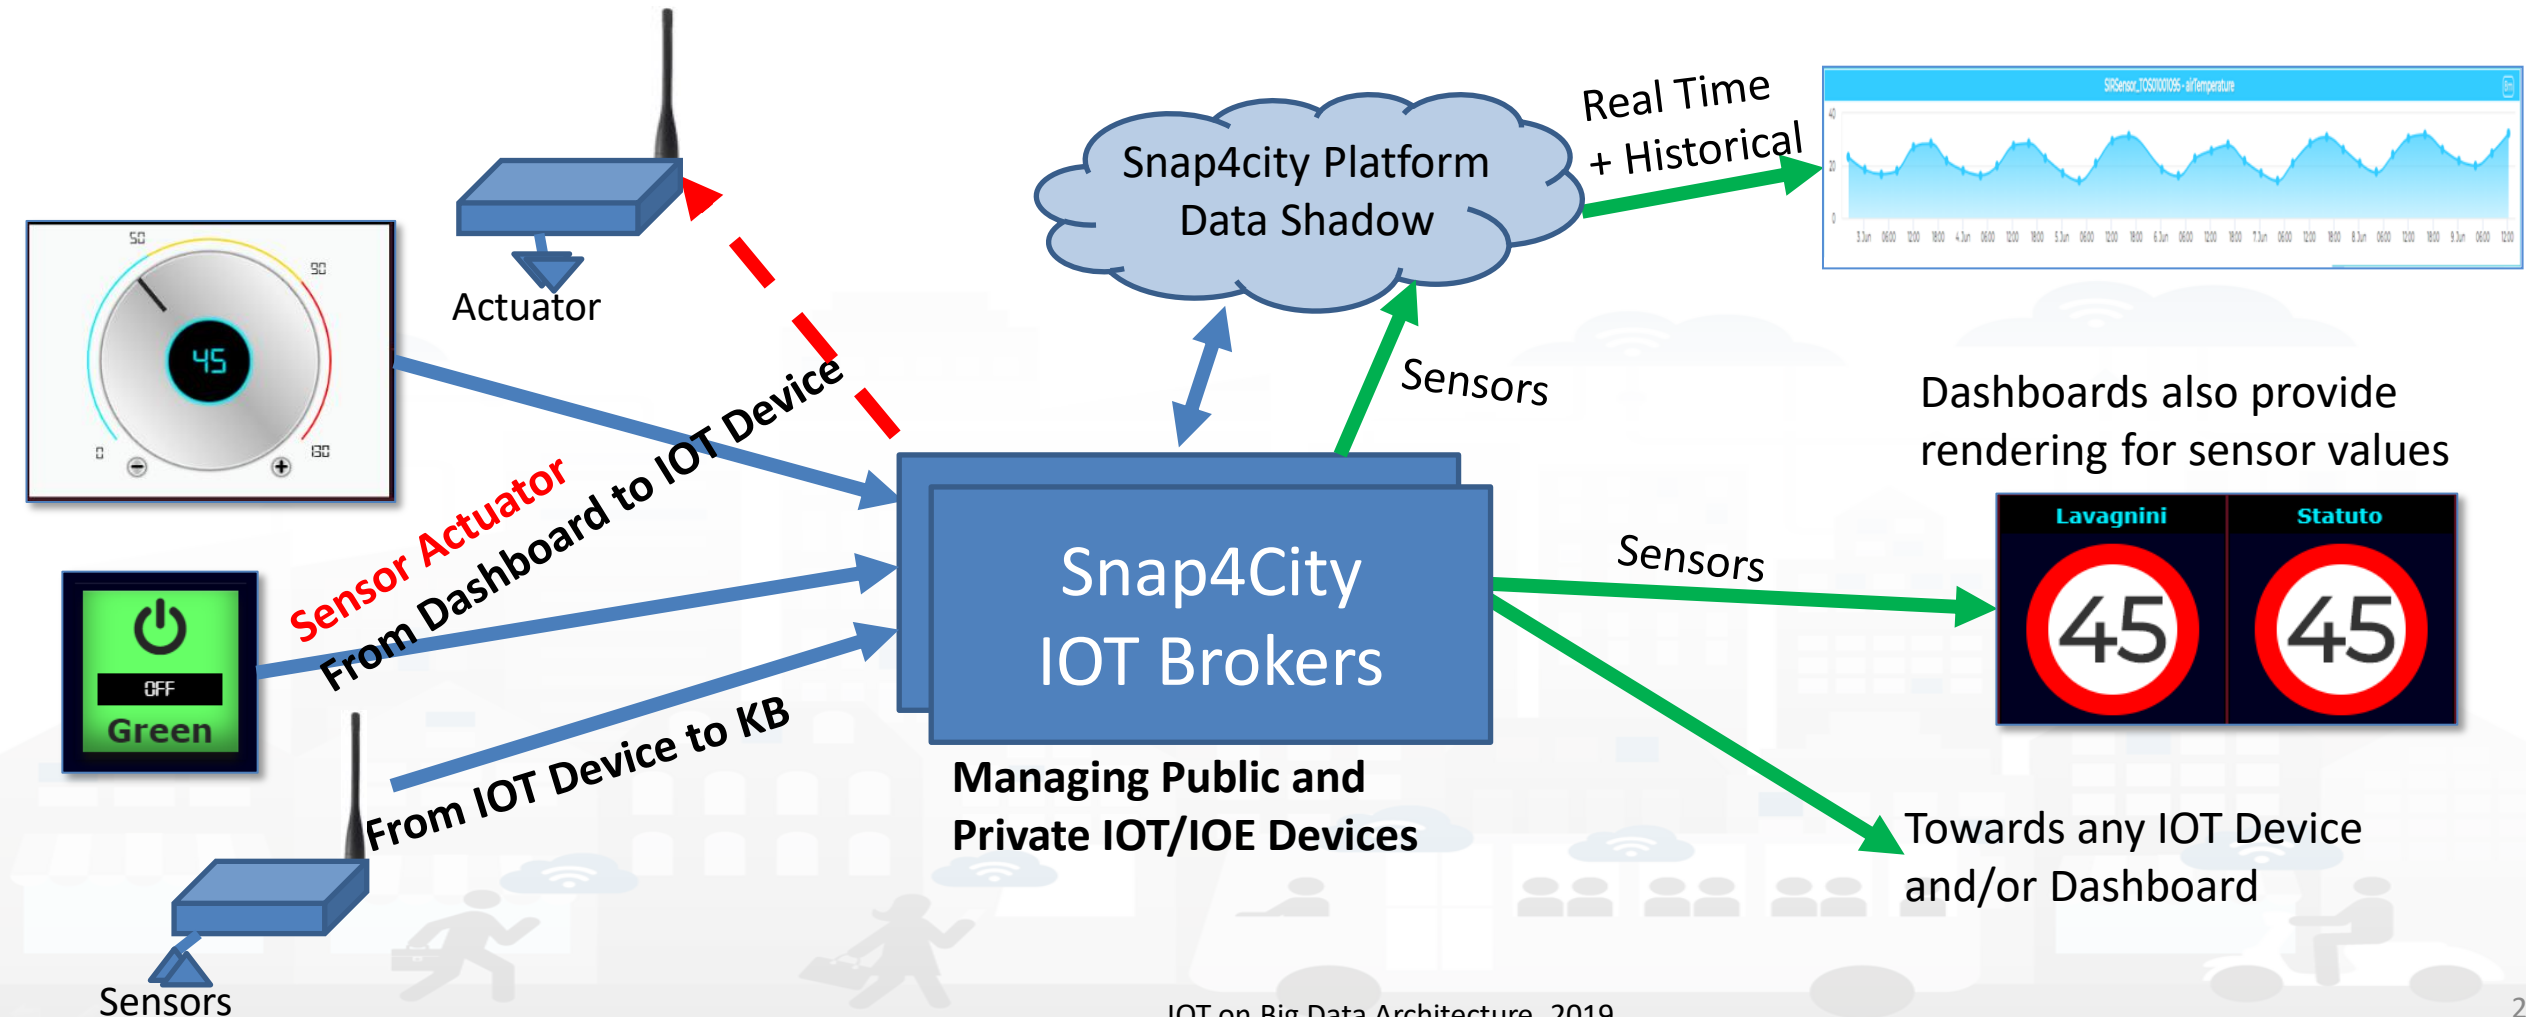

# Comparison of lowlevel IOT prot.

Protocolli IoT	Standard	Frequenza	Range	Data Rates
<b>Bluetooth</b>	Bluetooth 4.2	2.4GHz (ISM)	50-150m (Smart/BLE)	1Mbps (Smart/BLE)
<b>ZigBee</b>	ZigBee 3.0 based on IEEE802.15.4	2.4GHz	10-100m	250kbps
<b>6LoWPAN</b>	RFC6282	(adapted and used over a variety of other networking media including Bluetooth Smart (2.4GHz) or ZigBee or low-power RF (sub-1GHz))	Vedi protocollo di supporto	Vedi protocollo di supporto
<b>WiFi</b>	Based on 802.11n (most common usage in homes today)	2.4GHz and 5GHz bands	Approximately 50m	600 Mbps maximum, but 150-200Mbps is more typical, depending on channel frequency used and number of antennas (latest 802.11-ac standard should offer 500Mbps to 1Gbps)
<b>Cellular</b>	GSM/GPRS/EDGE (2G), UMTS/HSPA (3G), LTE (4G)	900/1800/1900/2100MHz	35km max for GSM; 200km max for HSPA	(typical download): 35-170kps (GPRS), 120-384kbps (EDGE), 384Kbps-2Mbps (UMTS), 600kbps-10Mbps (HSPA), 3-10Mbps (LTE)
<b>NFC</b>	ISO/IEC 18000-3	13.56MHz (ISM)	10cm	100–420kbps
<b>LoRaWAN</b>	LoRaWAN	Various (europe, 868Mhz)	2-5km (urban environment), 15km (suburban environment)	0.3-50 kbps

BUILD YOUR APP FOR A CONNECTED CITY

Smart Cities need to set up a flexible Living Lab to cope with the city evolution in terms of services and city users' needs and sustainability. Snap4City solution (<https://www.snap4city.org>) provides a flexible method and solution to quickly create a large range of smart city applications exploiting heterogeneous data and enabling services for stakeholders by IOT/IOE, data analytics and big data technologies. Snap4City applications may exploit multiple paradigms as data driven, stream and batch processing, putting co-creation tools in the hands of: (i) Smart Living Lab users and developers a plethora of solutions to develop applications without vendor lock-in nor technology lock-in, (ii) final users customizable / flexible mobile Apps and tools, (iii) city operators and decision makers specialized / sophisticated city dashboards and IOT/IOE applications for city status monitoring, control and decision support. Snap4City satisfies all the expected requirements of Select4Cities challenge PCP and much more, and it is 100% open source, scalable, robust, respects user needs and privacy; provides MicroServices and easily replaceable tools; compliant with GDPR; provides a set of tools for knowledge and living lab management, and it is compliant with more than 60 protocols including and its end user oriented communication. Snap4City is an official platform of FiWare, an official library of 3C Foundation, Node-RED, certified on

# Main Features of the IOT Directory

- **Registers IOT Brokers**
  - Different kind of Brokers, different kinds of authentications and protocols
  - Registered IOT Orion Brokers can be queried for collecting their managed devices, so that those IOT Devices are registered
- **Registers IOT Devices:** singularly or at groups (in Bulk)
  - Registration can be custom or based on IOT Device Model
  - IOT Edge are registered as special IOT Devices
  - Registered IOT Devices are saved into local Data base and Knowledge Base
- **Provides support for security aspects:**
  - Generation of Certificates, Keys, etc.
  - Collection of keys when IOT devices are on some IOT Gateway or Second Level IOT Broker.
- **Manages Ownership and Delegation** for
  - IOT brokers, IOT devices, IOT Device Values

# IOT Directory Features vs Users Roles

Entities	what	By using	Manager	AreaManager	ToolAdmin/RootAdmin
IOT Sensor/Actuator	Browse, use	Several Tools	X	X	X
	Delegate	IOT Directory	X	X	X
	Discovery	KB, API, MicroServices	X	X	X
IOT Devices	Browse, use	Several Tools	X	X	X
	Add/change/Delete	IOT Directory, API, ..	X	X	X
	Add in Bulk	IOT Directory, API, ..			X
	Delegate	IOT Directory	X	X	X
	Discovery	KB, API, MicroServices (MS)	X	X	X
IOT Device Model	use	IOT Directory	X	X	X
	create	IOT Directory		X	X
IOT Broker	Browse, use	IOT Directory	use	Browse, use	X
	Add/change/Delete	IOT Directory			X
	Delegate	IOT Directory			X
	Periodic Update	IOT Directory			X

# Add IOT/IOE Devices

Just Buy an IOT Device and register: SigFOX, MQTT, FiWare, ...

- Attach them by
  - Models
- A range of protocols, formats, approaches

Create your own devices:

- Arduino,
- Raspberry,
- Android,
- LoraWAN + Arduino,
- etc.

## Secure Communication: HTTPS, TLS (K1, K2), Certificates

The screenshot shows the 'Edit device-registration node' dialog in Node-RED. It includes a map of the Florence region and fields for device registration keys.

Device Name:

Model: Raspberry snap4city 1

Key 1\*: 3568dcdf-3167-4ee7-ac05-91d3a9668cb8

Key 2\*: 5e26b980-402e-4853-9edc-664e025254c8

These keys have been generated automatically for your device. Keep track of them. Details on [info](#)

# Exercitations

- Create a flow and app that:
  - when you press a button on the screen
  - provides you the arrival time of your preferred bus at your preferred busstop
- Create a flow and app that
  - When you press a button on the screen
  - provides you the list of the final destinations of the bus lines that pass from the bus stop:
    - 1) near to you at that moment or
    - 2) one that you chose.
    - 3) Or a fixed one
- Create a flow and app that
  - When you press a button on the screen
  - provides you the list of the final possible POI that you can reach
    - 1) at a reasonable walking distance of 500 meters
    - 2) using the bus lines that pass from the bus stop, and that can allow you to reach the places within 20 minutes max
- Create a flow and app that:
  - Keep you informed any way, every 3 minutes
  - Providing you the next time of arrival of your preferred bus at your preferred busstop
    - presenting information on mobile screen
    - sending information via telegram

# SigFOX piattaforma di sviluppo

# IOT Dev Management: activities

- **IOT Devices can be open or proprietary**
- **IOT Devices:** a large range of protocols, formats and kind
  - IOT Devices (single or in bulk) are **registered** on IOT Directory and thus according to Knowledge base are registered to be used in IOT Applications, Dashboards, etc. with Shadow values, etc.
  - IOT Models are saved on IOT Directory for shortening the registration process
  - IOT Device healthiness is monitored automatically
- **IOT Devices can be public or private**
  - **Full support of Proprietary protocols and devices**
  - **Providing Open Hardware and Open Software** IOT Devices/IOT Edge: NGSI fully secure
- **IOT Edge** are devices with some computing capability, realized by using: Raspberry, Android, Linux, Windows, etc.
  - **Release as:** OS images on SD, APK for Android, Virtual Machine, Docker Container, etc.
- IOT Devices are connected via **Secure Encrypted Mutual Authenticated** channel of communication

# Lora IOT Device, Arduino

- Arduino Uno, Mega
- LoraWan Connection
- Any sensor, + I2C
- Fully Customizable
- Open Source
- NGSI or any other protocols
- Gateway: Dragino

# LoraWan Gateway out of the Box

- Raspberry Pi Based LoraWan Gateway
- Physical UpLink as: Wi-Fi, RJ45
- Logical UpLink: LoraWAN TheThingsNetwork, NGSI V2 (mutual authenticated Snap4City)
- Powered 5V
- GeoLocated GPS Antenna
- IOT Edge Snap4City Included if needed

SigFOX  
Any and  
Arduino

# IOT Device with Arduino

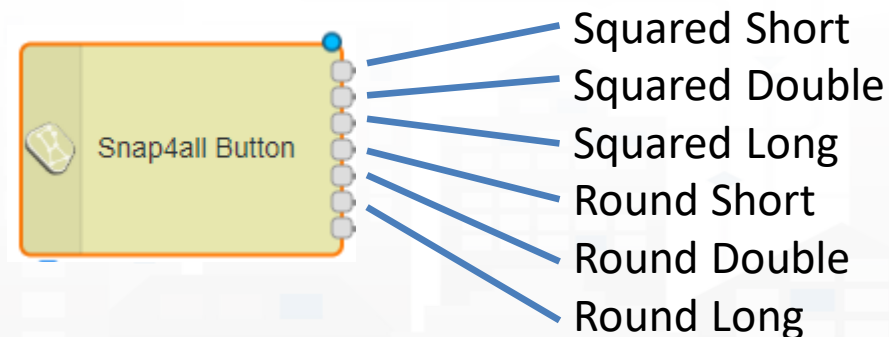

- Arduino Uno
- Wi-Fi shield, standard
- Mutual Authentication with certificates, or K1,K2,sha
- Secure encrypted connection, NGSI
- Open Source
- Fully Customizable
  - Any sensor
  - NGSI or any other protocol

# Snap4All IOT Button

- Multi Wi-Fi
- Ready to use BLE
- ESP based, cheap & easy
  - low/no energy consumption/ standby
- Mutual Authentication with certificates, or K1,K2,sha
- secure encrypted connection, NGSI
- Open Source, Fully Customizable
- HW extensible to sensors

# Snap4City on Raspberry Pi, IOT edge

# IOT Edge Computing

## City user

Would like to:

- Monitor and exploit temperature and humidity
- Manage sensors
- Perform edge computing
- Using these data for multiple applications

IOT Broker

Click here

## Steps:

1. Registering the device and sensors
2. Create flow on edge device using NodeRed with Snap4City, sending data to Broker
3. Use data from Broker on Snap4City IOT App

# lot app behind

The screenshot displays the Snap4City dashboard interface. On the left is a sidebar menu with categories like 'IOT Applications', 'External Services', and 'Development Tools'. The main area is titled 'PAXCounter Antwerp Control' and shows a Node-RED flow diagram. The flow starts with a 'https://github.com/cyberman54/ESP32-Paxcounter' node, followed by several 'timestamp' nodes connected to function nodes for controlling the display and range. These function nodes connect to 'msg.payload' nodes, which then connect to MQTT topics for device status and configuration. The interface also shows a 'Tax Counter Status' widget and a 'connected' indicator for the MQTT connection.

# Capabilities

- **Creating IOT Applications for:**
  - **Controlling industrial/local processes** locally and globally
  - **Exploiting IOT Edge for local IOT Applications**
    - Local smartness, limited computational capabilities, limited dashboarding
    - Resilience wrt lack of power and connectivity: autonomous
  - **Sending data on Cloud** via secure connection and for:
    - business intelligence, data analytics, machine learning
    - Global scale and local scale analytics
    - Dashboarding at global scale
    - remote control and actions on industrial processes
    - Logging of the activities

# IOT Devices and IOT Edge (Self Training)

- **A large range of Devices** can be used on Snap4City:
  - Proprietary or Open HW/SW.
  - Devices of/for makers on which we provide Open source code
- **Documentation and instructions:**
  - [TC9.4 - IOT application exploiting Edge computing with Raspberry](#)
  - [TC9.7 - Connection from LoraWan Dragino/arduino to Orion broker](#)
  - [Snap4City: Arduino & ESP8266 IOT Device NGSI](#)
  - [Snap4City IOT Devices Registration](#)
  - [Snap4All IOT Button: based on ESP32, NGSI compliant secure connection](#)
  - [IDE Setup for Snap4All IOT Button, and source code](#)
  - [Registering IOT Edge: example of Raspberry Pi, total security](#)
  - [Creating: IOT Device, Raspberry Pi based, totally compliant with Snap4City](#)

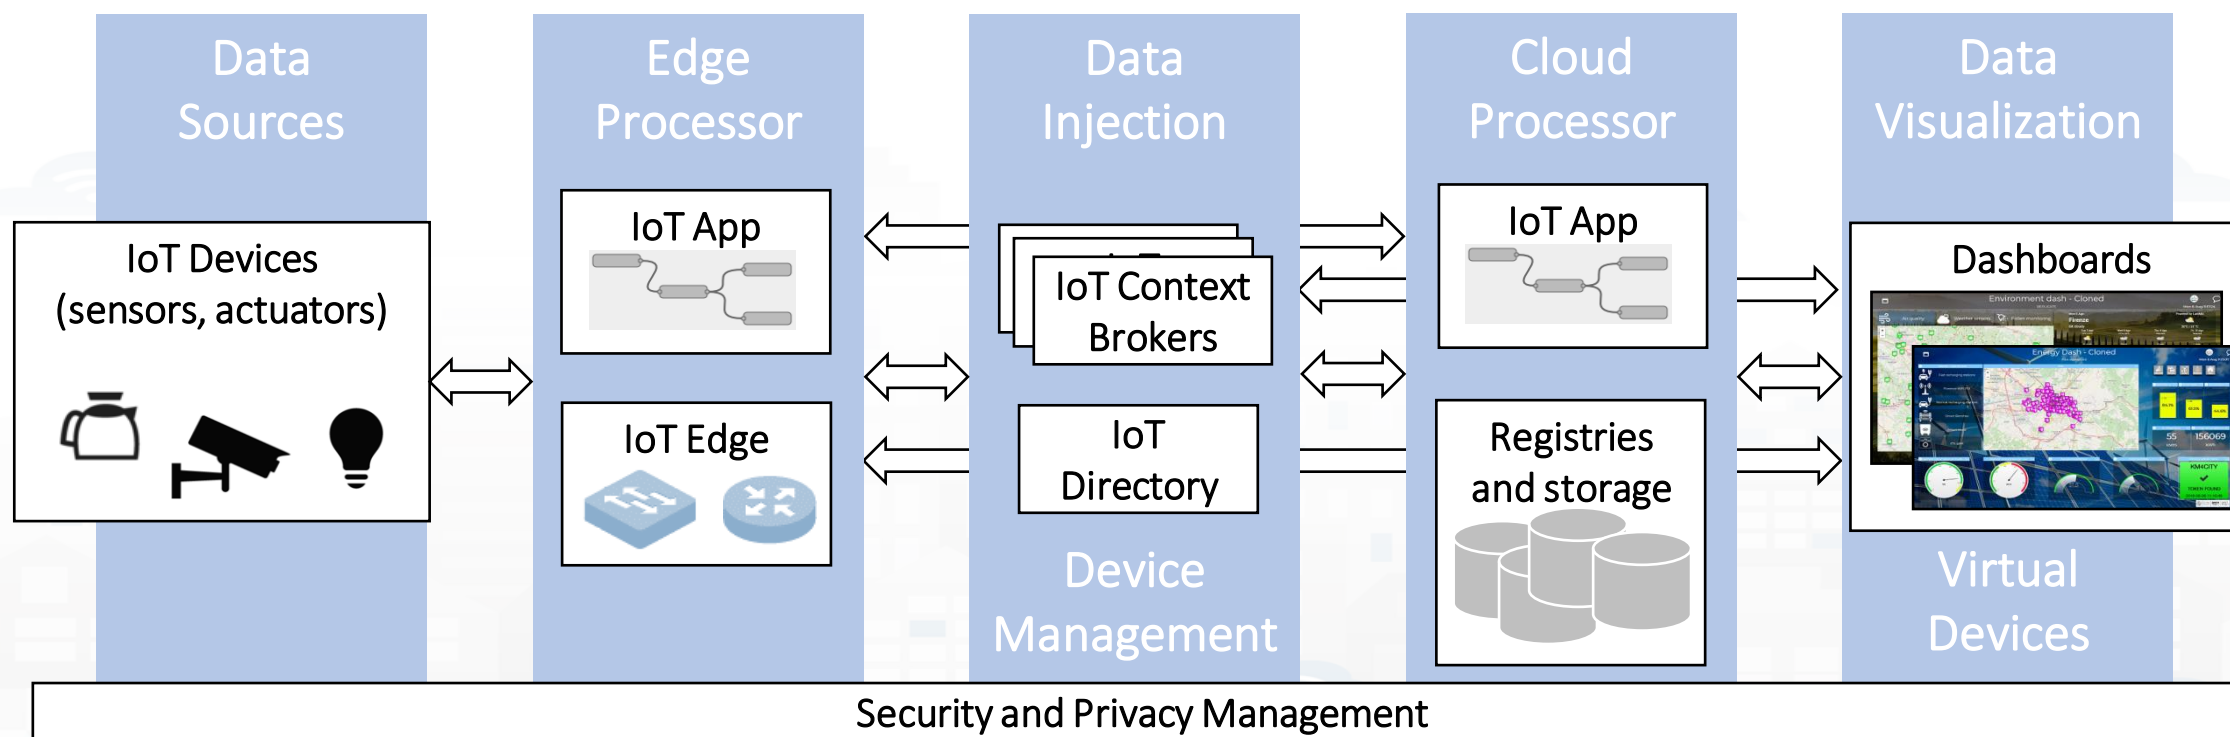

# *End-to-end security on IOT infrastructures*

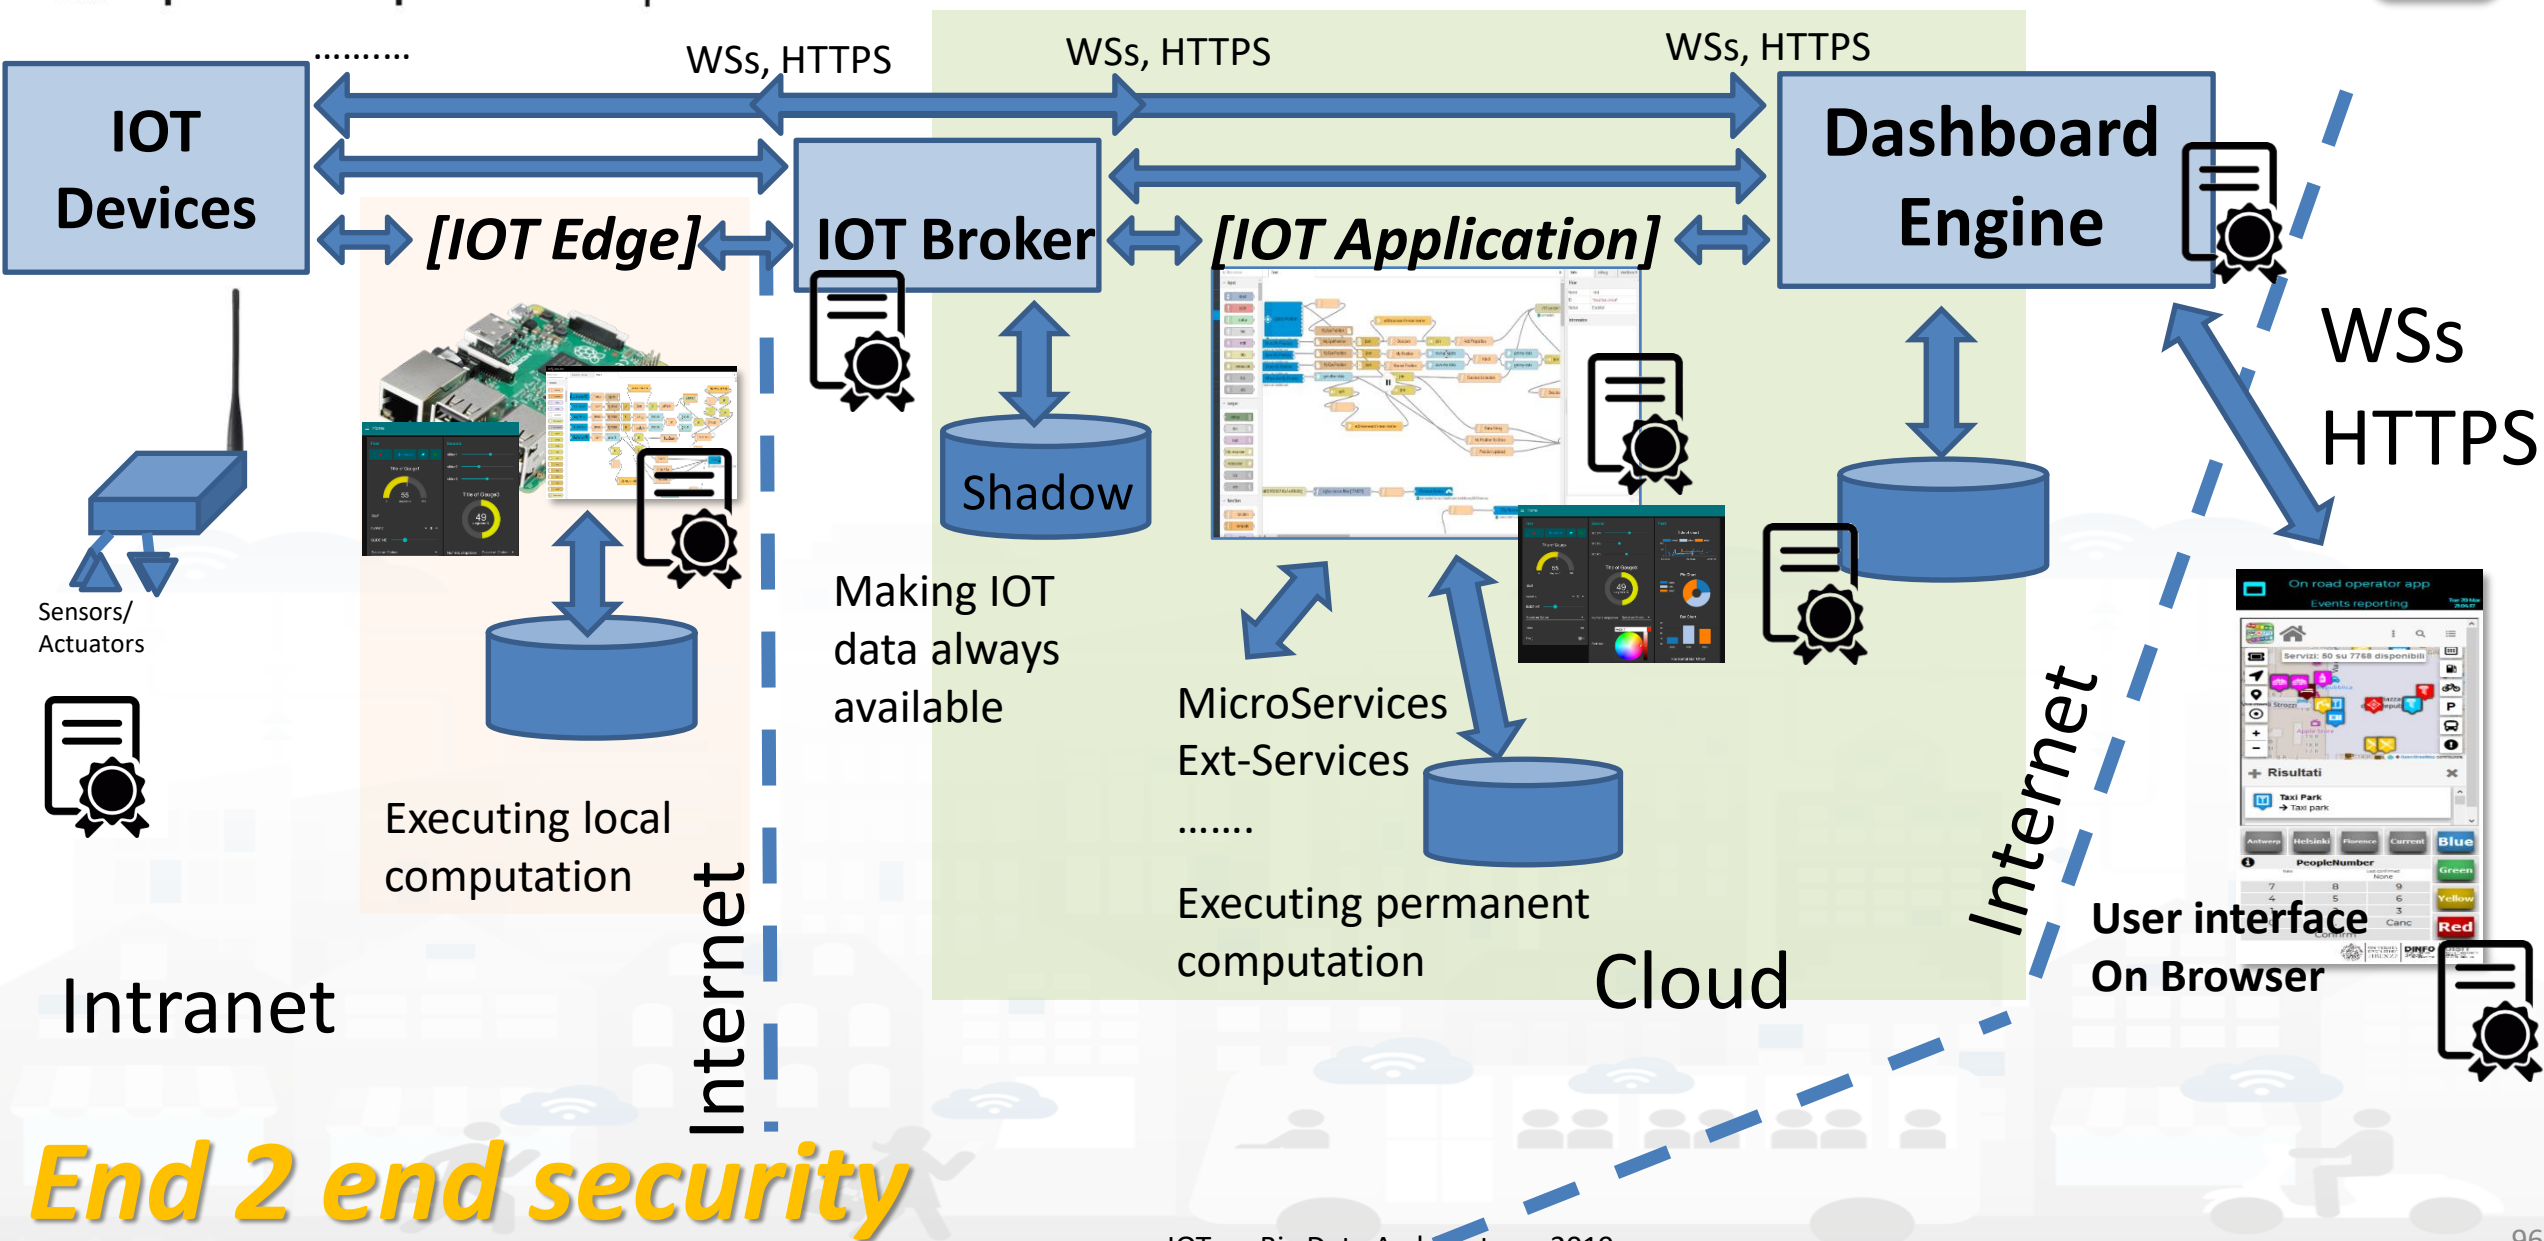

# Complexity in Smart City IOT Platforms

End to End security

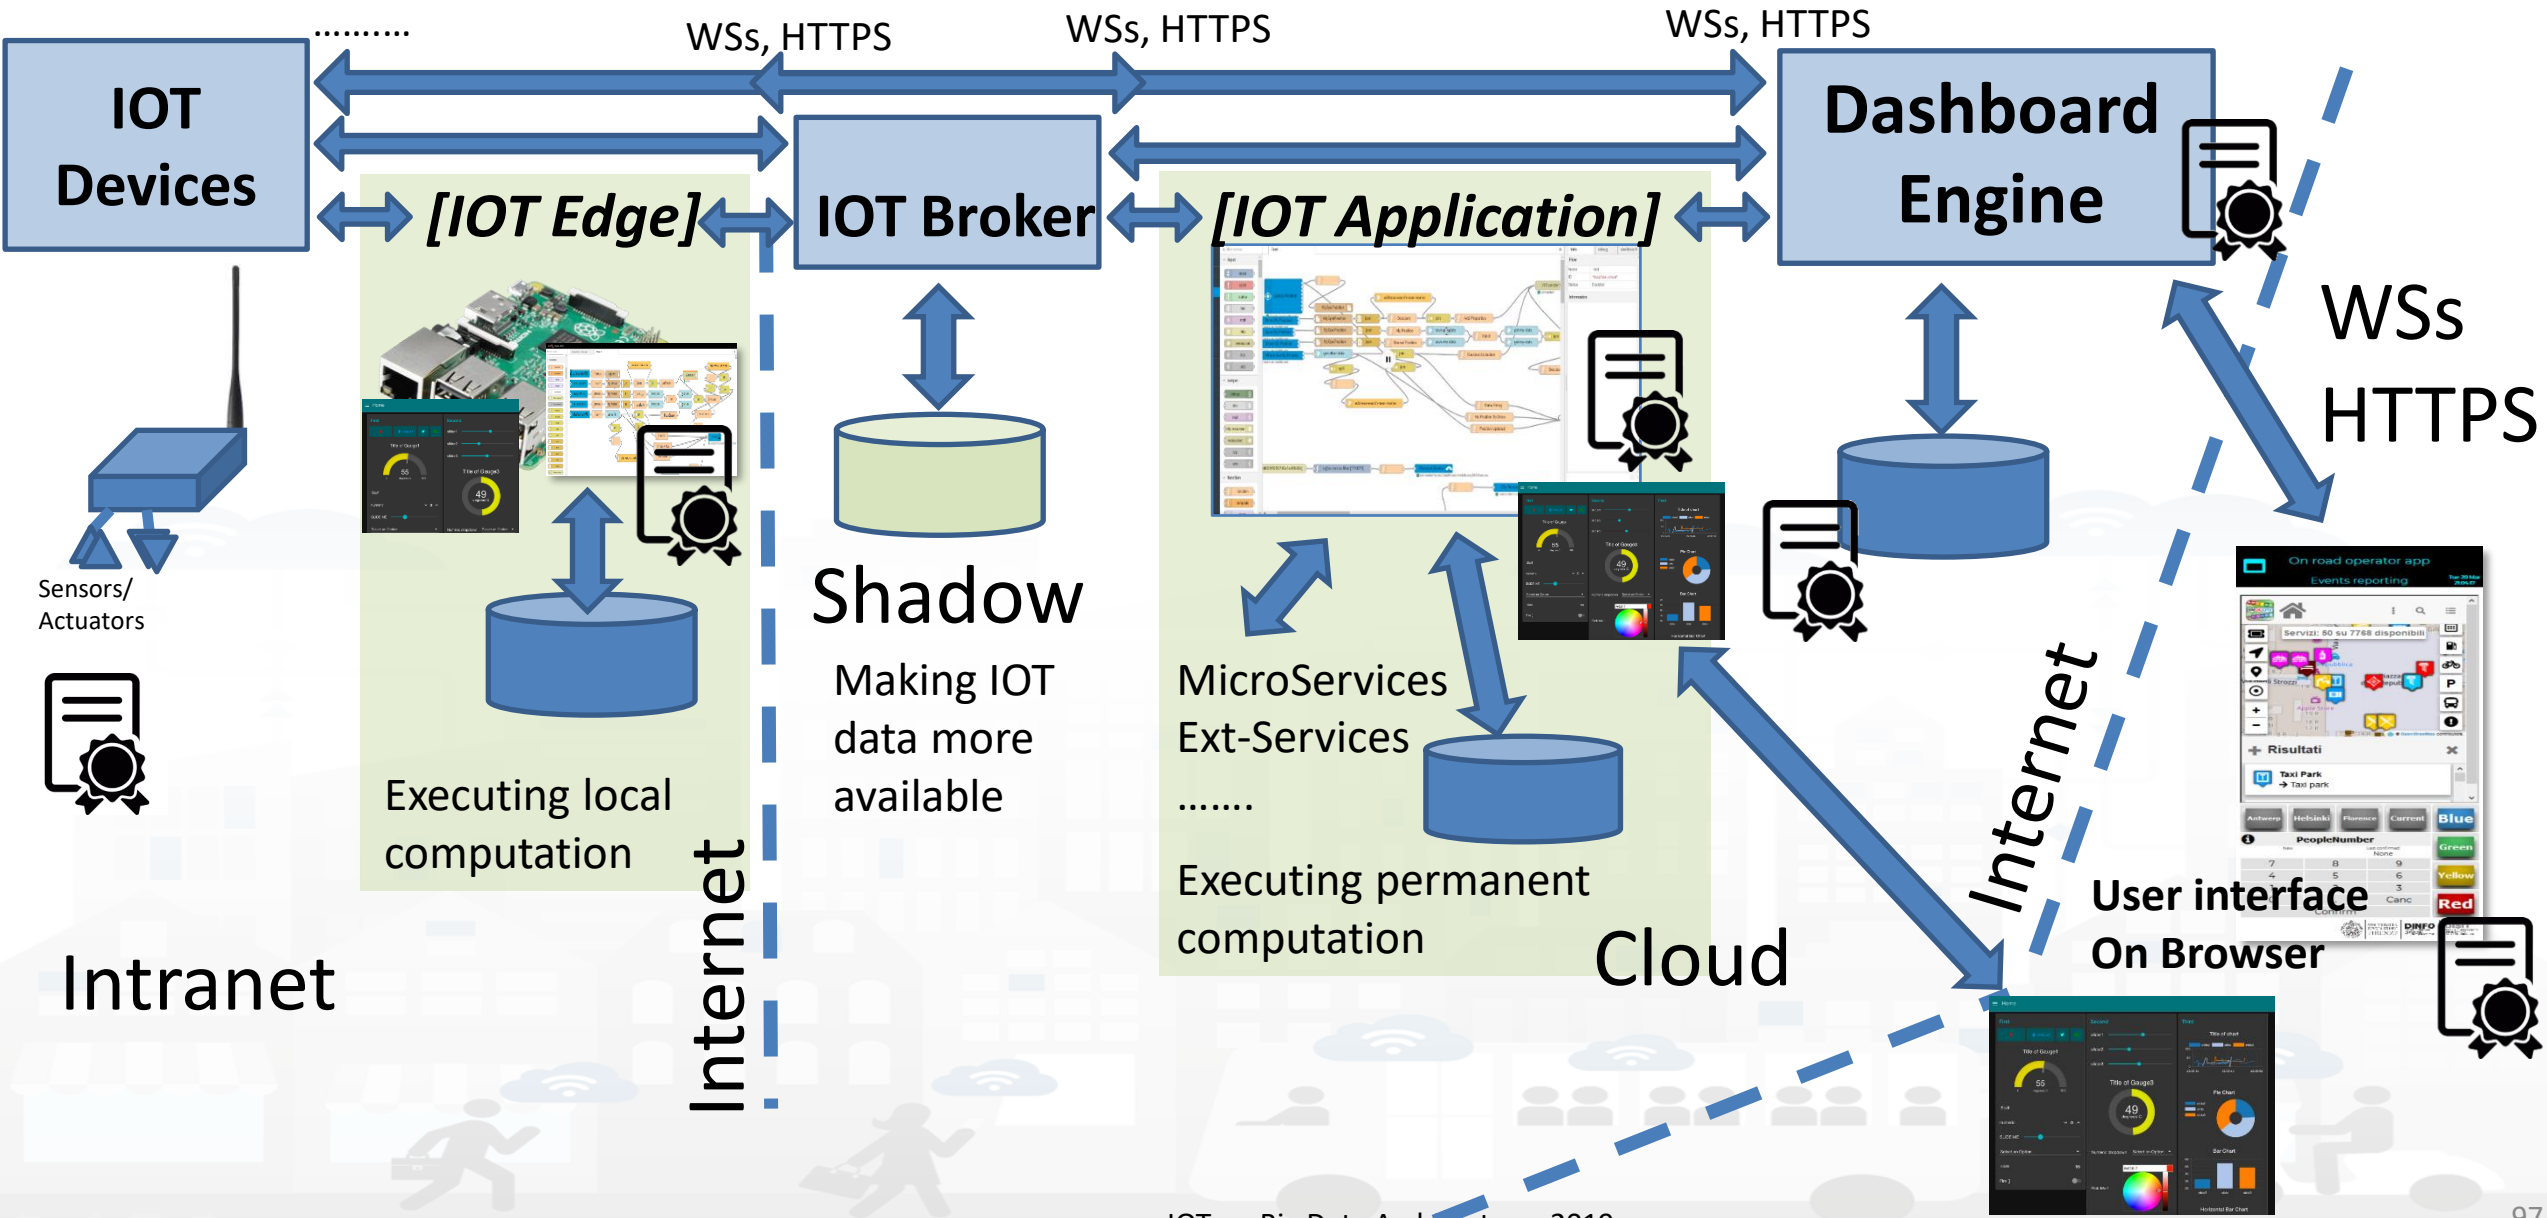

– From IOT Devices to Dashboard (user interface)

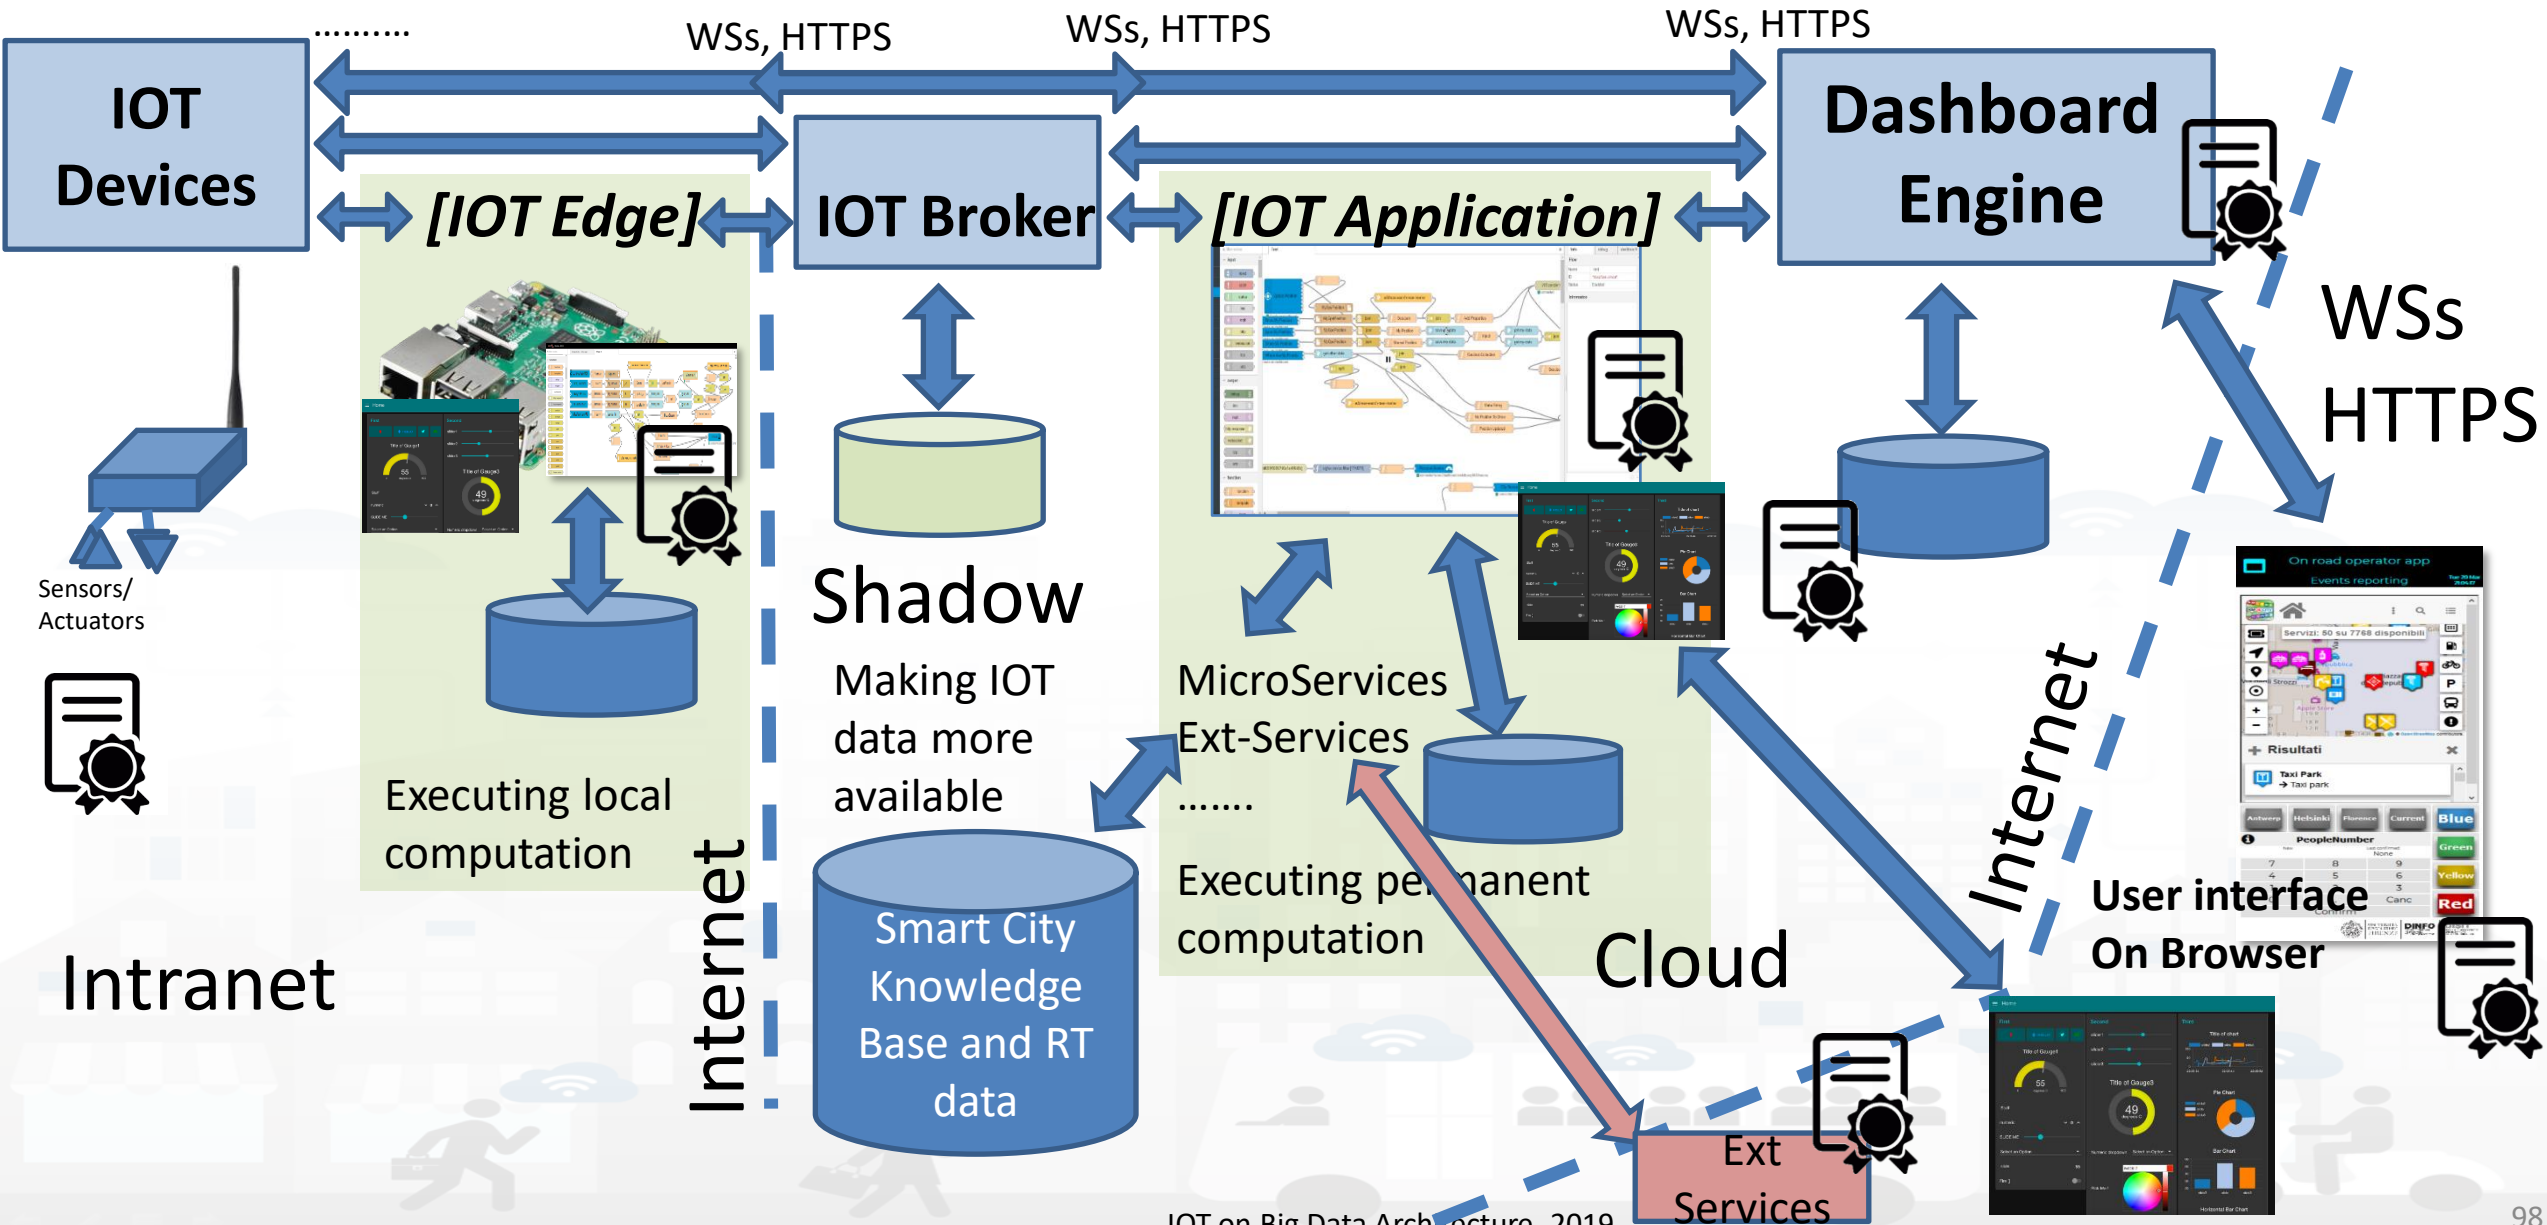

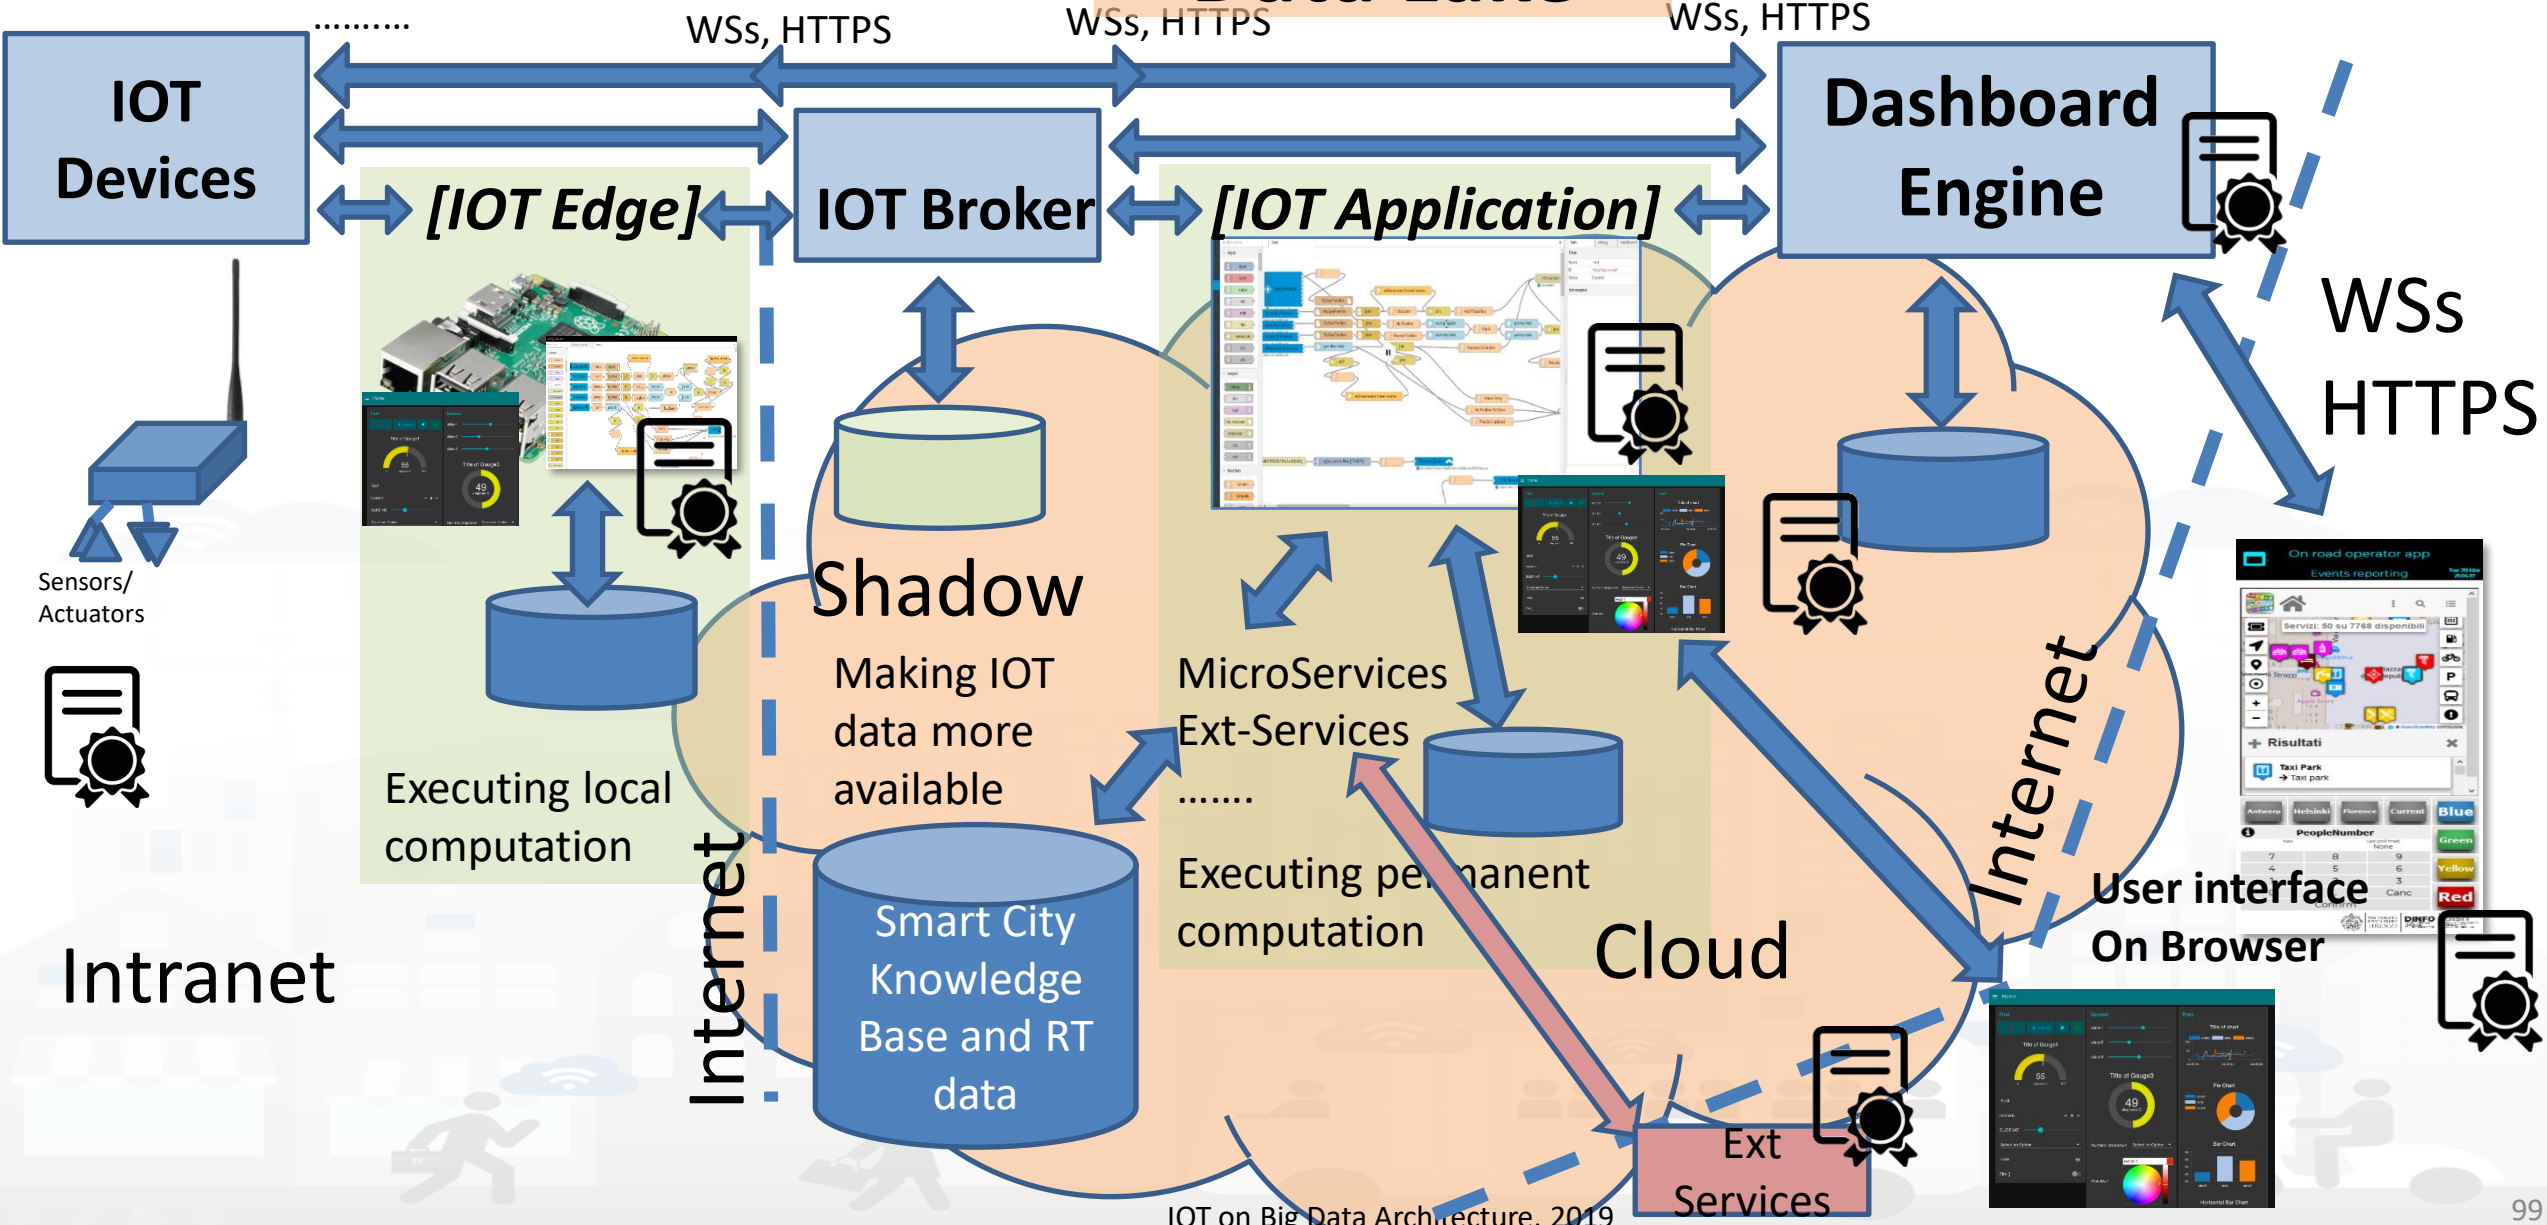

**End 2 end security**

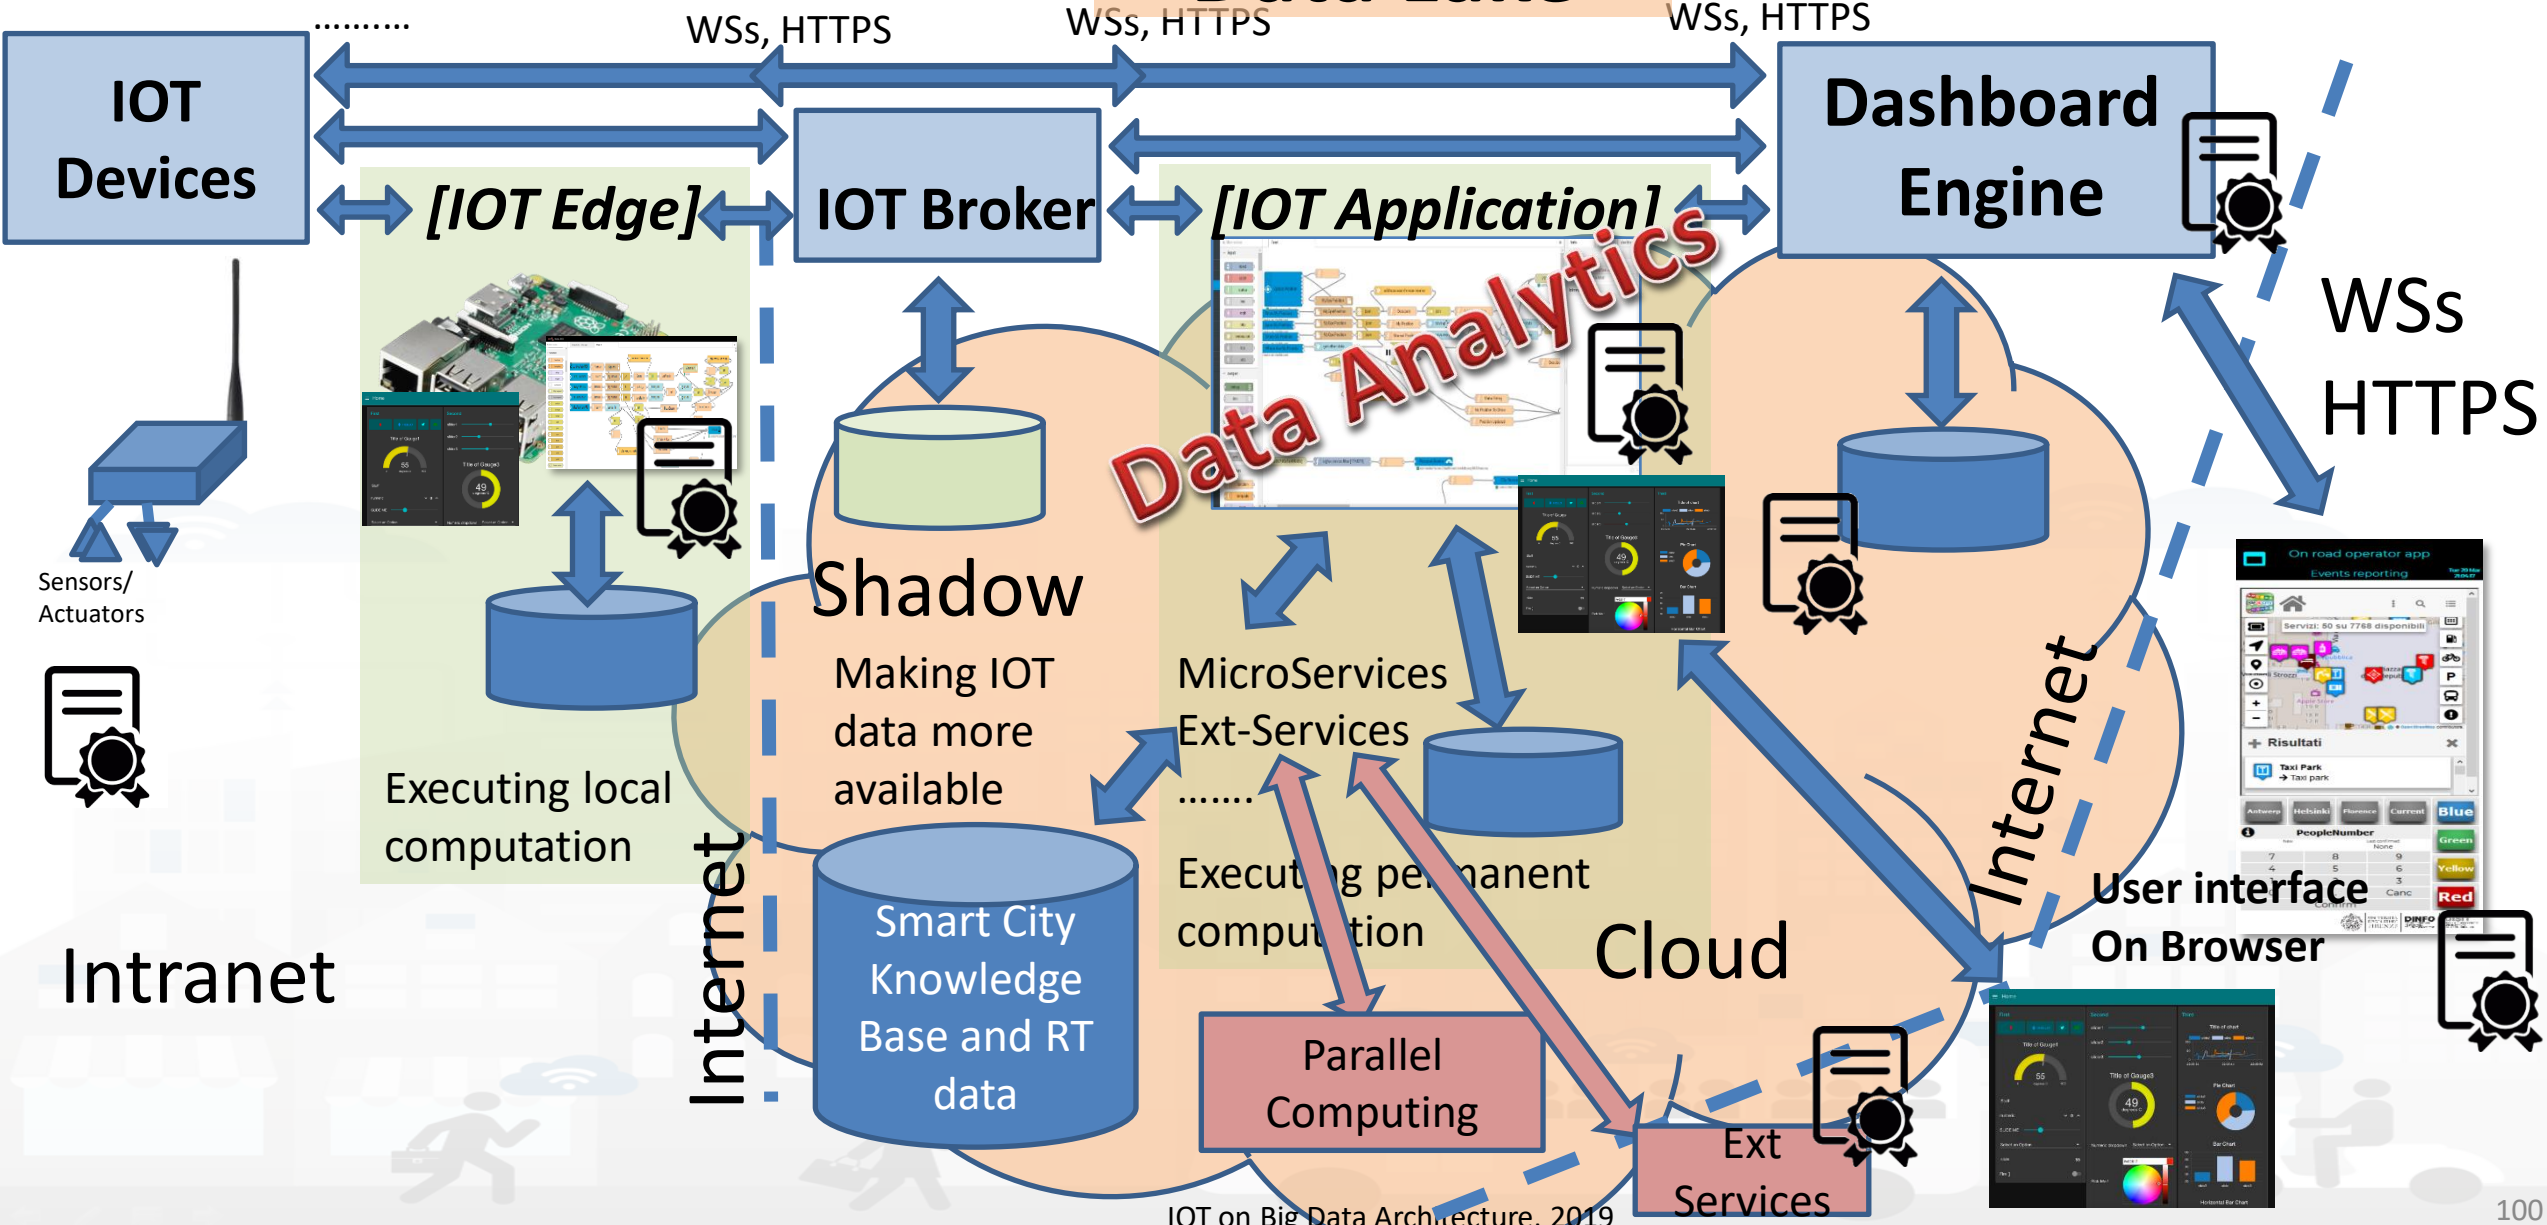

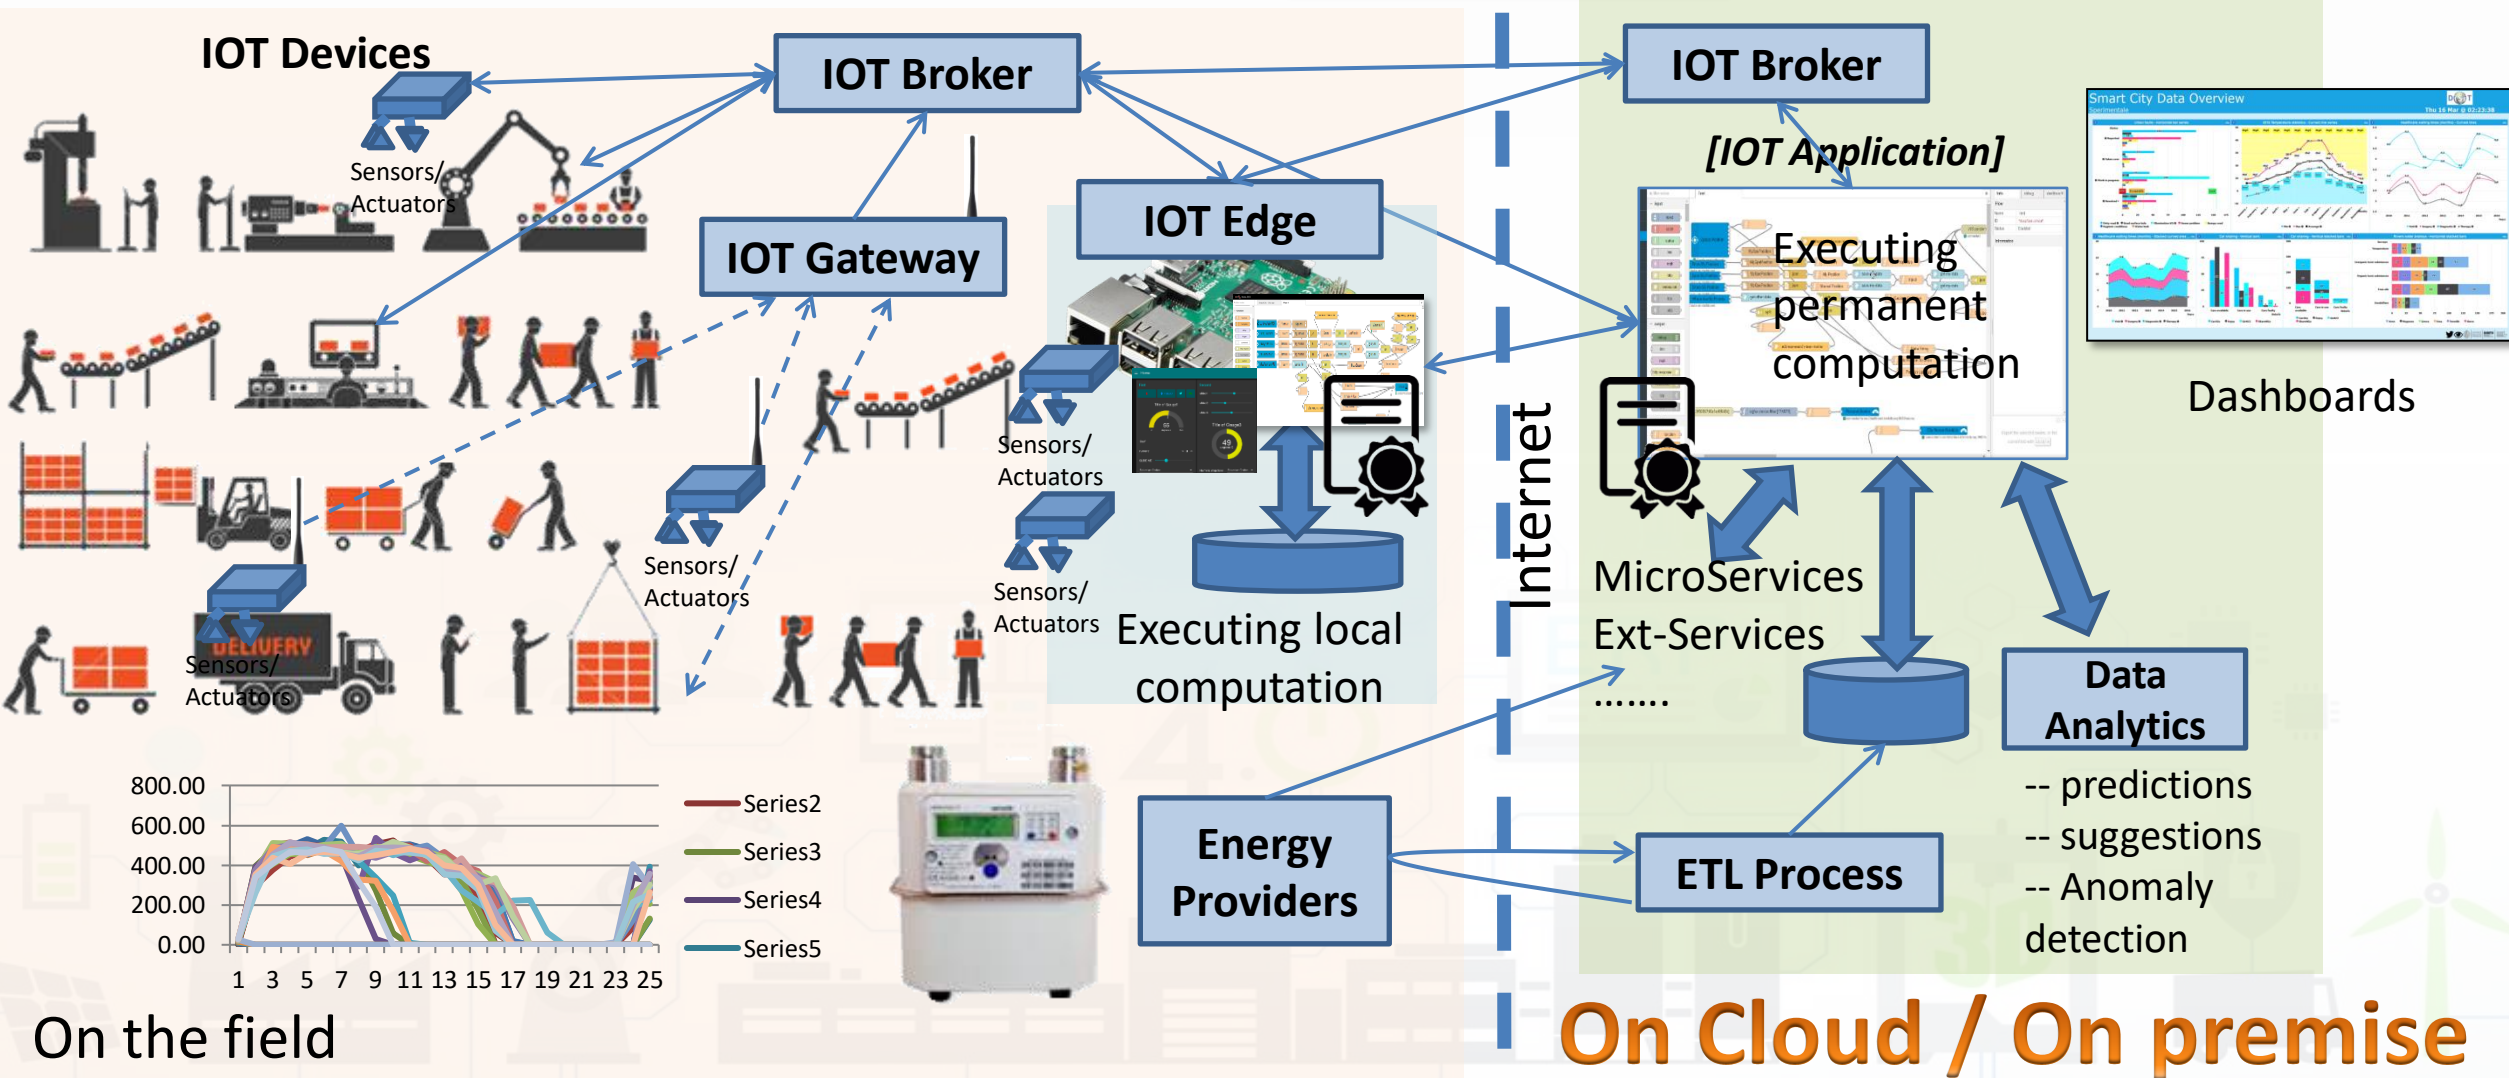

# Grouping on Data Lake

# Grouping on Data Lake

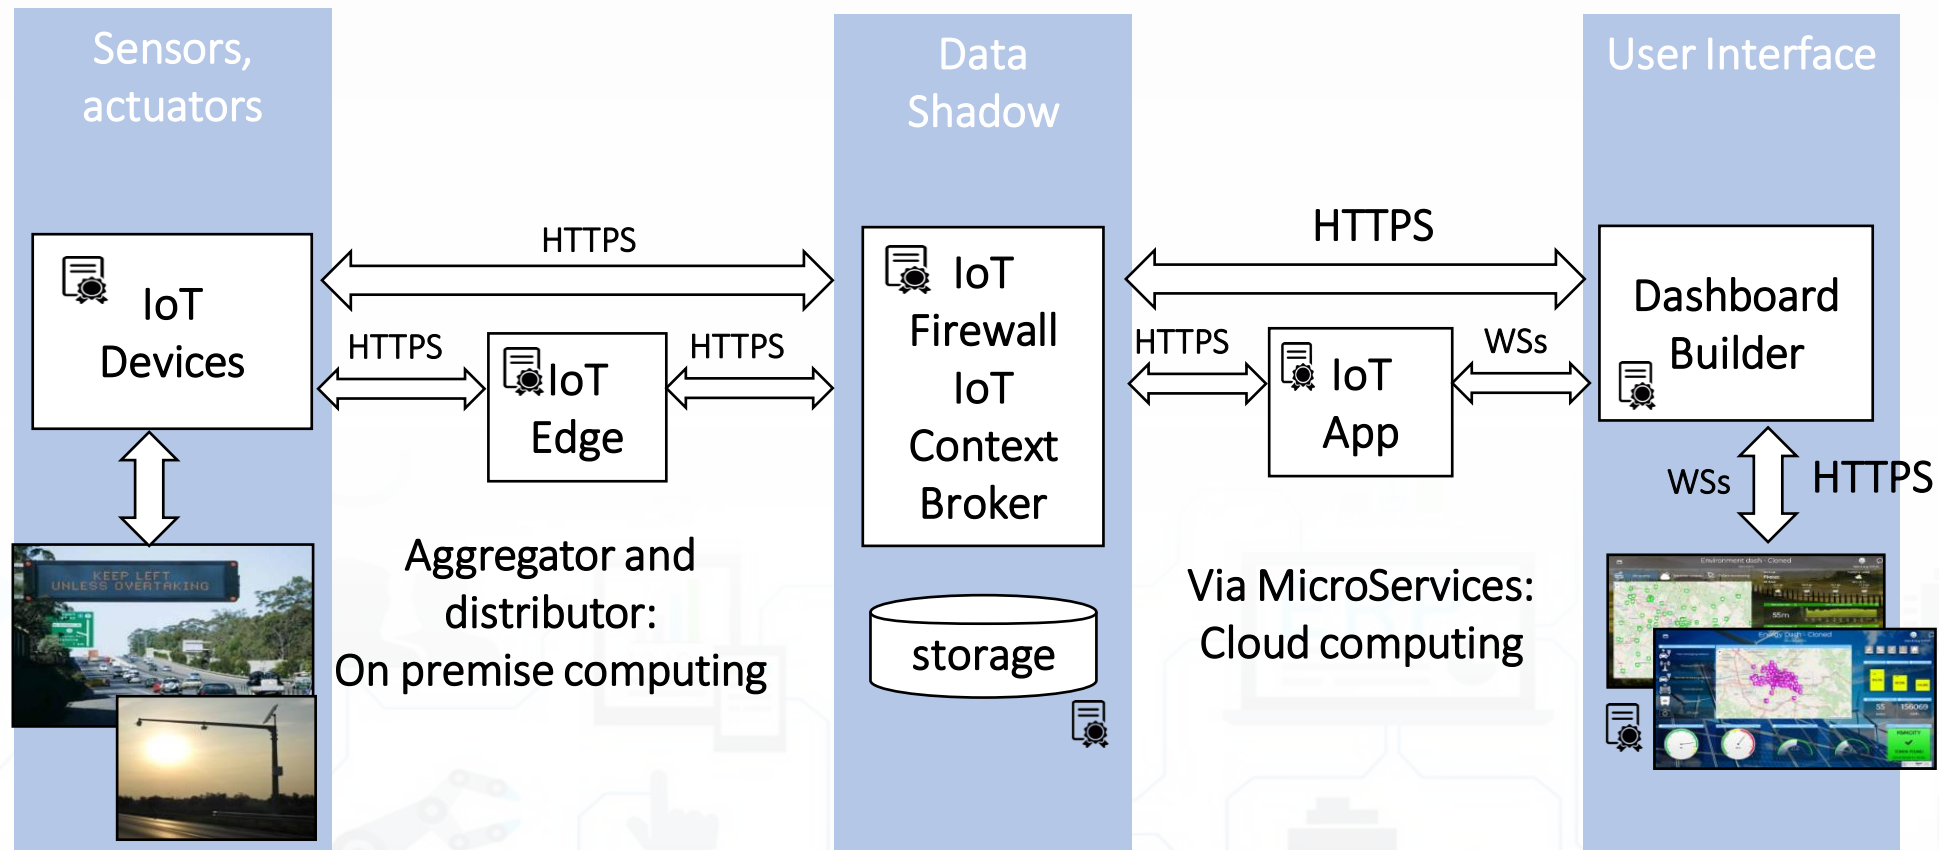

# Industry 4.0 Application

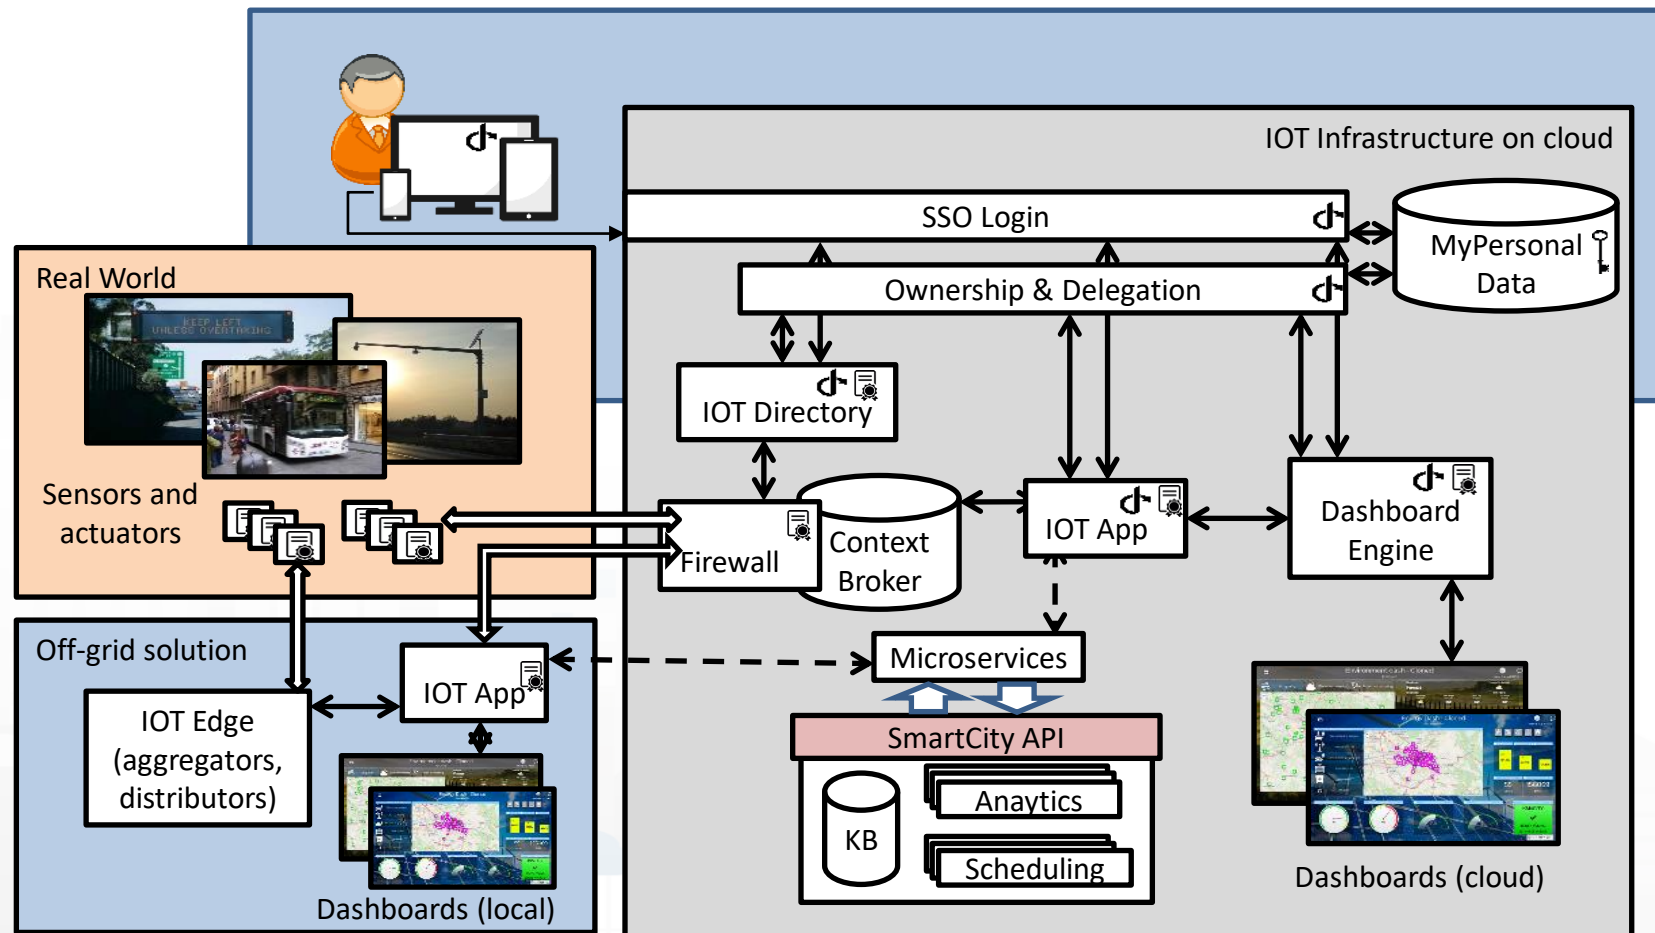

# The secure stack

# Snap4City Solution (User-Data)

- User data protection (by design)
  - Encryption on **any** personal data and storing in an isolated environment
  - Ownership and delegation (user access control and consent management)
  - Accessible remotely via APIS with authentication and authorization (LDAP and OpenIDconnect)
    - Description of user credentials Roles / Groups / Organization
    - In an encrypted way (TSL/SSL)
- Elapsing time (by default)
  - Deleting by temporally marking (investigative authorities audits)
- Tracking any activities → monitoring and auditing

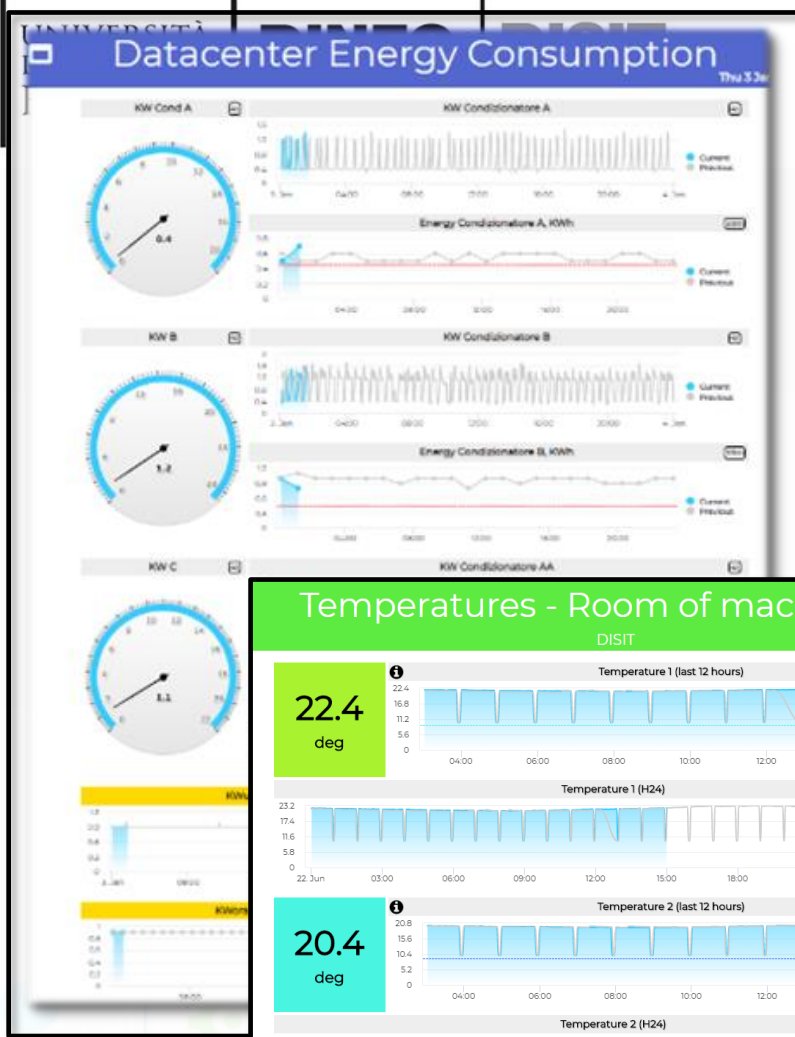

# Establishing Protected connections

- For example:
  - From IOT Broker to IOT Applications: sending data
  - From IOT Applications to
    - IOT Brokers: registering, subscribing, sending, etc.
    - MyPersonalData: save and reload (key + personal data + personal KPI)
    - Dashboards
- etc.

# Data Protection, Personal Data vs GDPR

# GDPR: General Data Protection Regulation

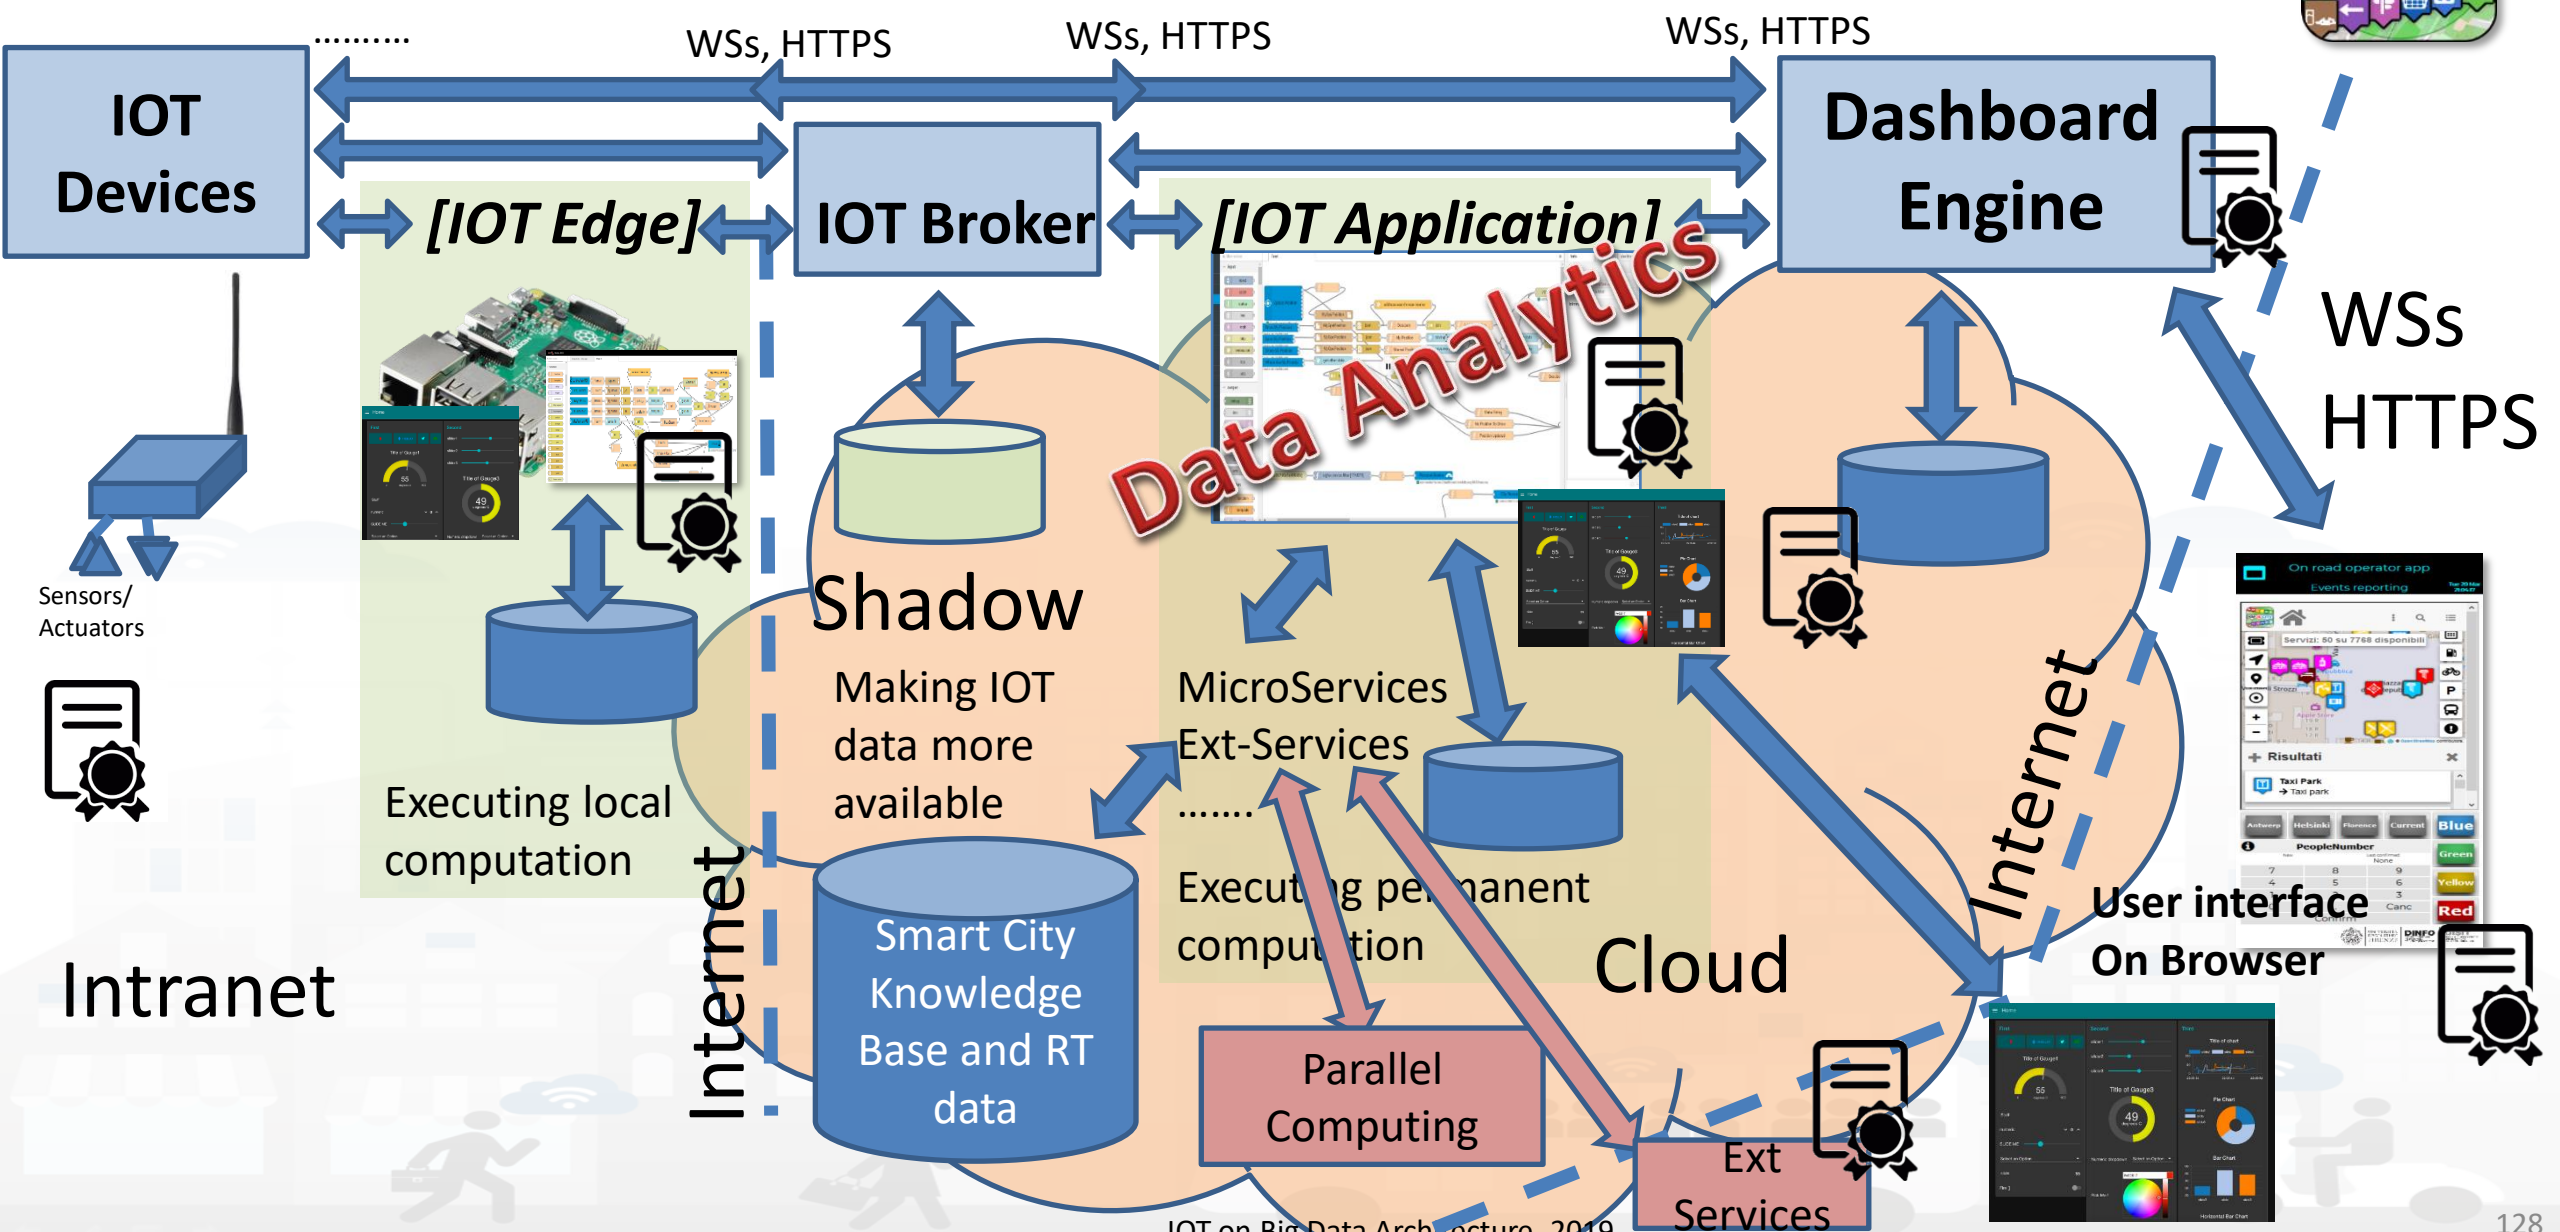

- **Users are going to decide to:**
  - provide access to who, for do what, until we consent
  - accept terms of use by **signed** consent **for each** data management **service**, *before was a simple informed consent*
- **from each service, the user has to be capable to**
  - **See** what the provider collect in terms of its Data Type: traces, logs, paths, profiles, accesses, IOT devices, sensors, maps, etc.
  - **Download, delete, inspect** each single Data Type
  - **Auditing and Revoke access** or **grant** access right to **each single Data Type**
  - **Delete all Data Types in single shot** or singularly (**forget all about me**)
- Correctness
- Transparency
- Security
- Integrity
- Privacy
- Auditing
- ....

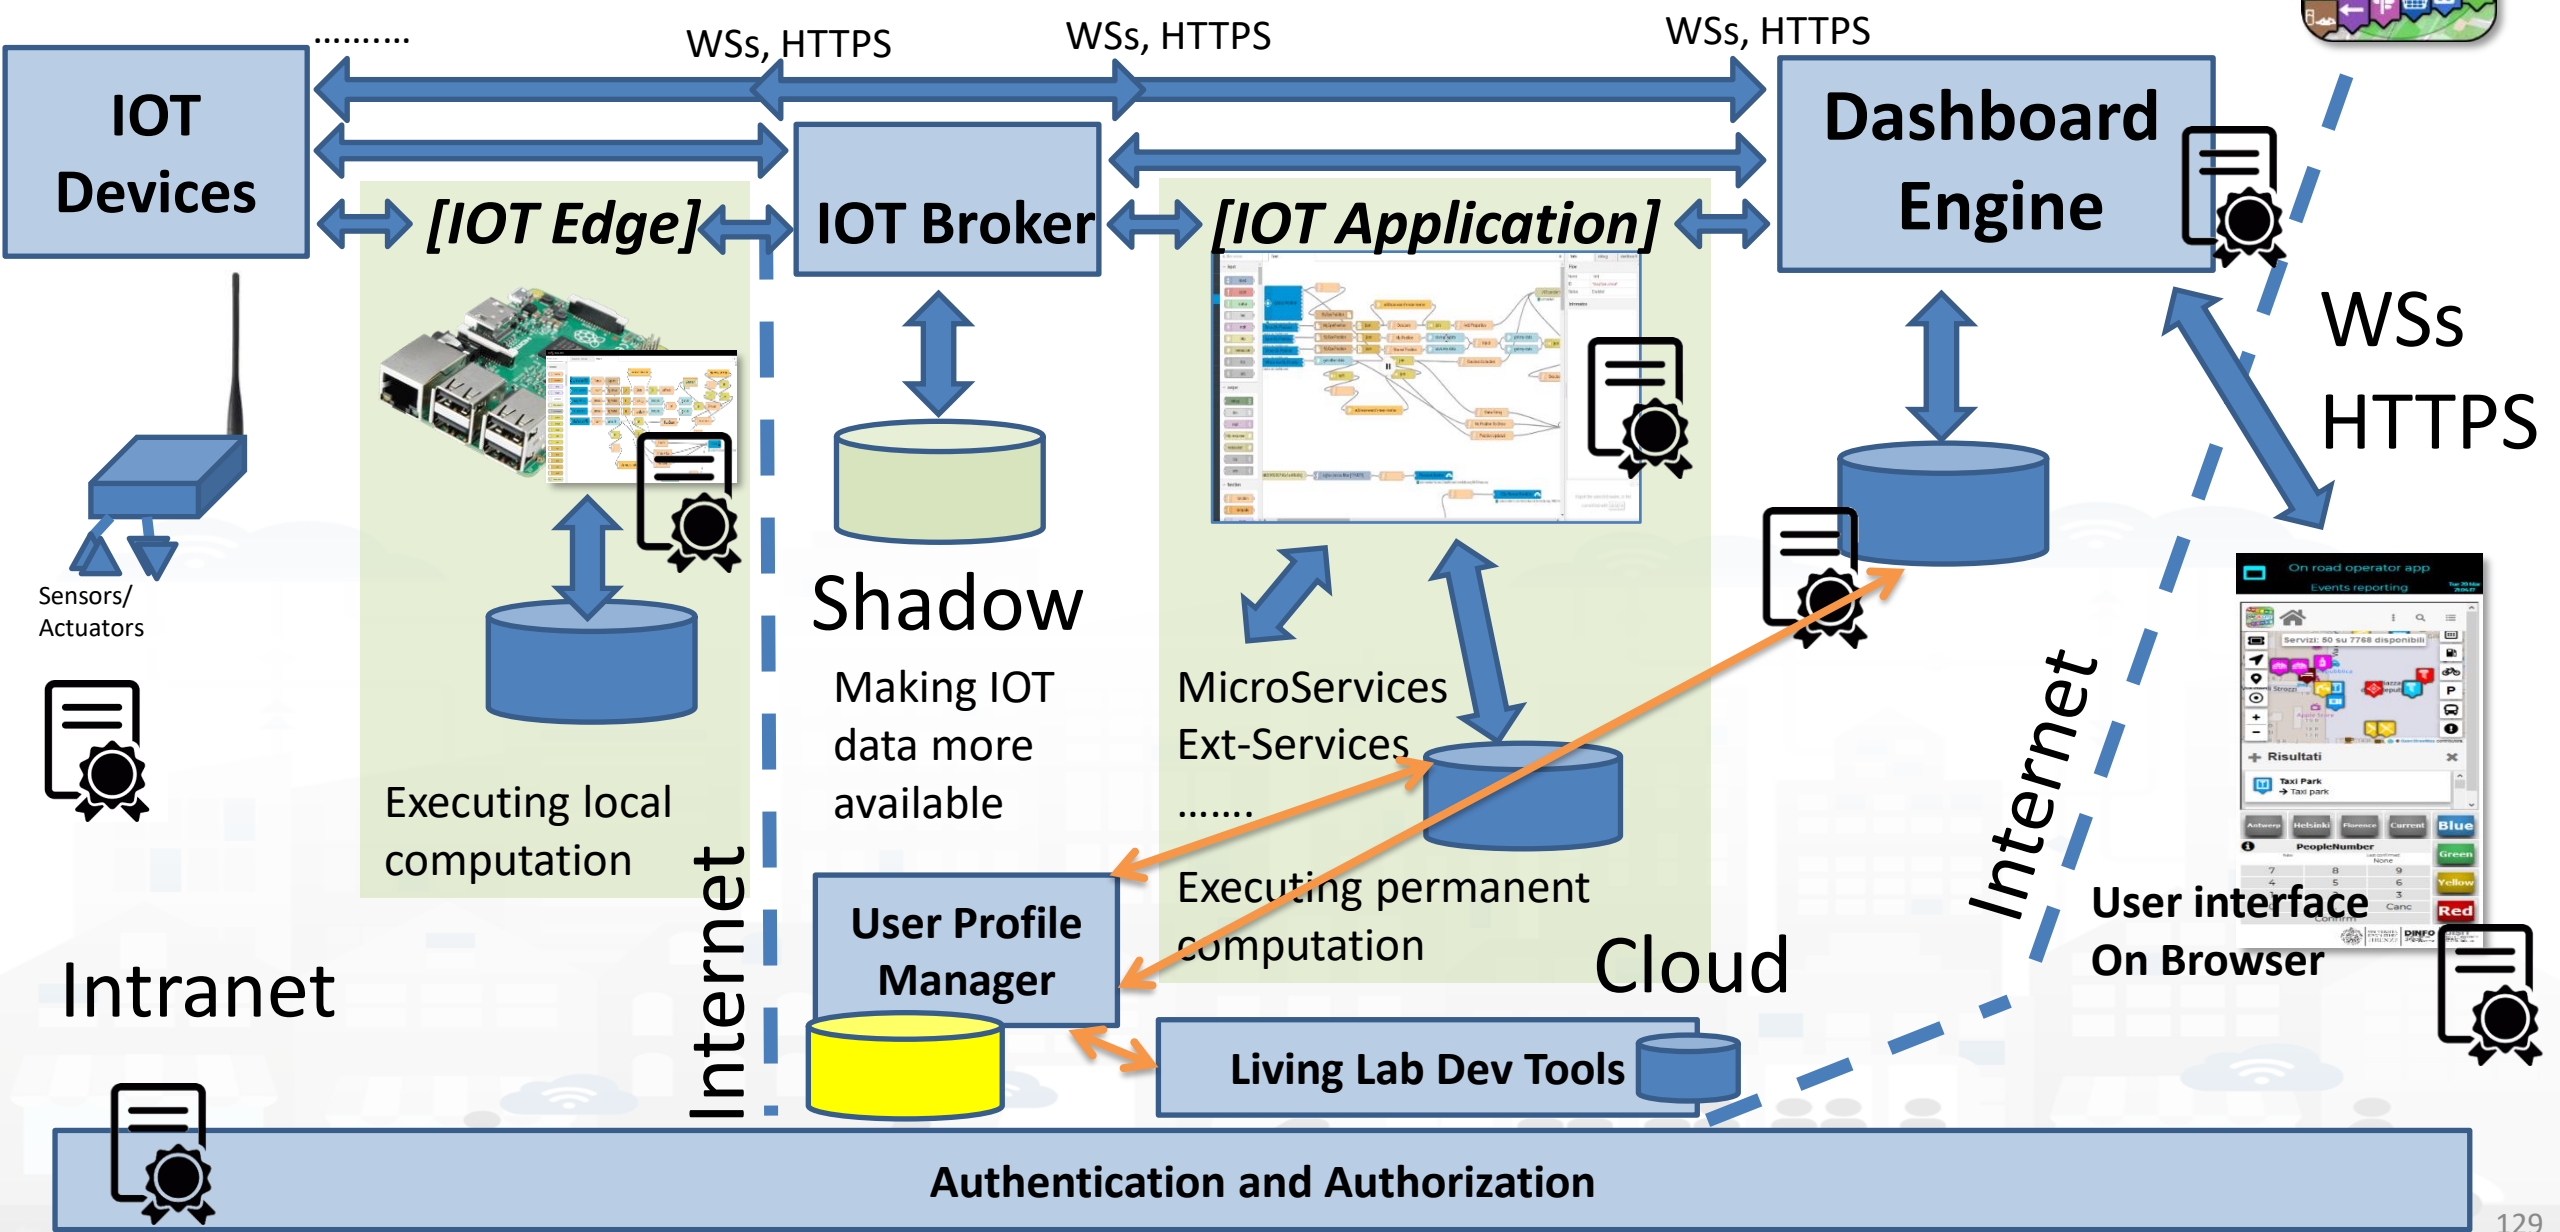

# GDPR: General Data Protection Regulation

- If personal data are **published by the owner**
  - the data have to be **released anonymously**,  
→ also in this case they can be **revoked at any time**:
  - **Complexity reside** on: *distributed vs centralized control, revoke of Votes/scores, comments, .... If they are saved singularly or they already exploited in processing*
- GDPR also imposes **Technical Constraints** such as:
  - **Secure connection** in any private data exchange
  - **Encrypted** data store for all private data
  - **Decoupling** data and personal IDs
  - Allow the **Auditing** of private data usage
- **Relevant taxation** is foreseen when rules are violated, % of turnover

# GDPR Compliant

## My Personal Data Types

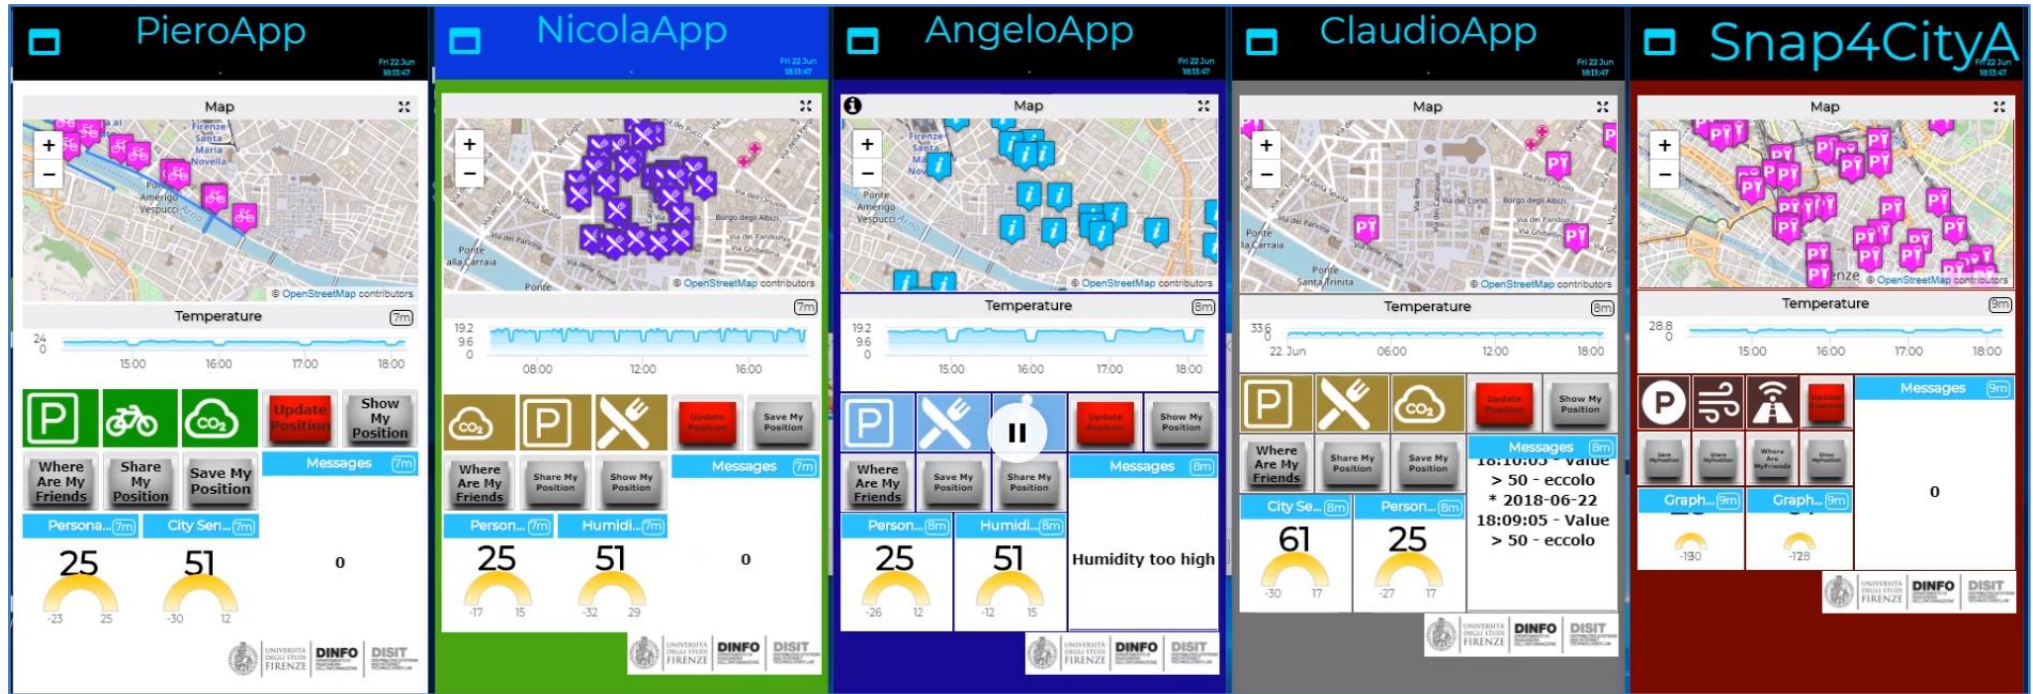

- My profile data and Blogs
- [My personal data by IOT App](#)
- My IOT sensor data service URI
- My IOT sensor data service GraphID
- My Annotation data
- My IOT Devices
- My IOT Applications
- My Dashboards
- Auditing Access to My Data

Forget me all!

- Manage Profile and MyPersonalData
- For each Data Type:
  - Start as private → making them public (anonymous) and revoke
  - The Owner is the only one that can: (1) modify values; (2) change the ownership
  - Define/revoke Delegation to Access
  - Delete/forget per Data Type and “me all!”.
  - Auditing

# Managing **MyPersonalData** in secure manner

## Examples:

- 1) Social IOT: A group of friends share some data with other according to GDPR: GPS position, Medical parameters as Glucose, etc.
- 2) saving and retrieve personal sensitive information.

The users manage their Personal data via personal mobile Dash and IOT App, and configuration on the portal and/or Mobile App

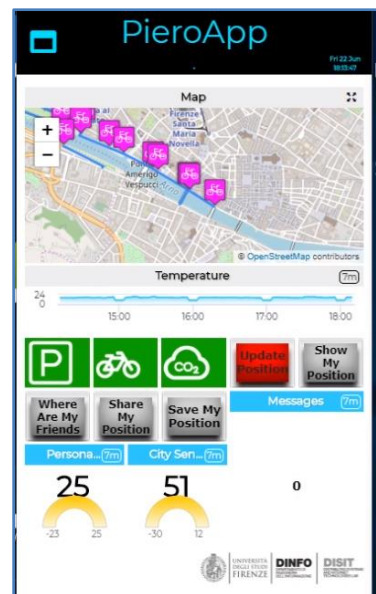

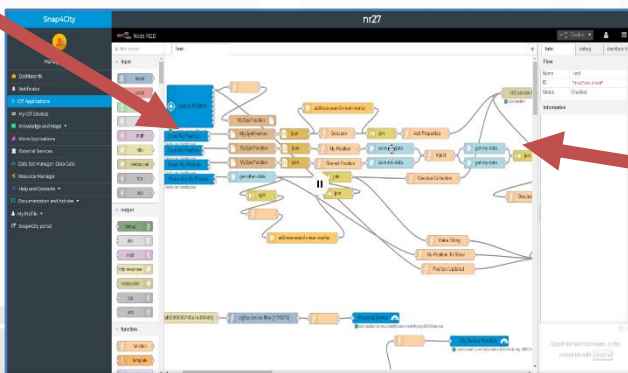

# Managing **MyPersonalData** in secure manner

## Example:

- Piero shares some data with selected friends according to GDPR: GPS position
- He managed the data via personal mobile Dashboard and IOT Application

Smart City  
Services and  
IOT/IOE

### My Personal Data Types

Forget me all!

# Some Consideration on GDPR

- **Complexity of GDPR with end-to-end secure connections**
  - IOT Platforms as AWS, Microsoft Azure, Google IOT, etc. are not compliant yet.
  - Smart city GIS platforms as ESRI ArcGIS are not compliant yet.
  - Many Smart City platforms are not compliant yet.
- **Limitations are usually applied to simplify the solutions**
  - Limiting the number of supported protocols
  - Selling proprietary devices that may be attached on that secure chain
- **Snap4City is resulting platform developed for Helsinki and Antwerp to satisfy the above described requirements in Open Source**
