

Workshop ABF Challenges, Pisa, 2012

# Music Accessibility for Visual Impaired

**Paolo Nesi, Giuseppe Nicotra**

*University of Florence*

*Department of Systems and Informatics*

*Distributed Systems and Internet Technology Lab, DISIT Lab*

*[Paolo.nesi@unifi.it](mailto:Paolo.nesi@unifi.it) tel: 0039-335-5668674*

*<http://www.disit.dsi.unifi.it>*

*06-July-2012, Pisa, Italy*

# Music Domains

- Music is a **multifaceted** and **multidomain** space
- **Audible Space** is the effective valuable result of a long and heavy work of the artists: composers and performers
  - interpreting a representation / description (the original work) with the aim of transmitting the intentions and emotions of the composer
  - Almost «*visual representation*»
- The **transmission** of **music as sound** is quite recent since the recording technology is recent.
- On the other hand the **music representations** on physical «visual» support is quite old.

# Music Coding

# Braille Music Notation

- from the Valentin Haüy work of coding for music reading, **in 1925 Louis Braille** placed the basis for coding/writing music on dots rather than on lines
- Braille's music notation (and not only music) allows a visually impaired teacher to **teach at sighted and visually impaired students**

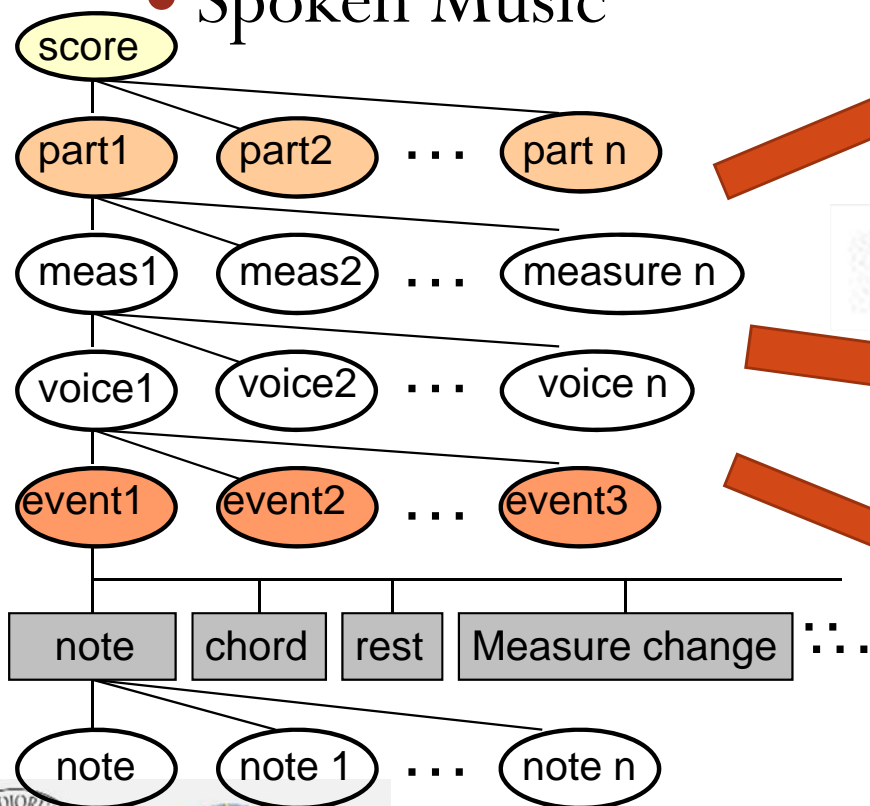

The same music in print and in Braille

# ICT as Enabling Technology

- **Symbolic Music coding** can be rendered in:

- Classical notation
- Braille notation
- Spoken Music

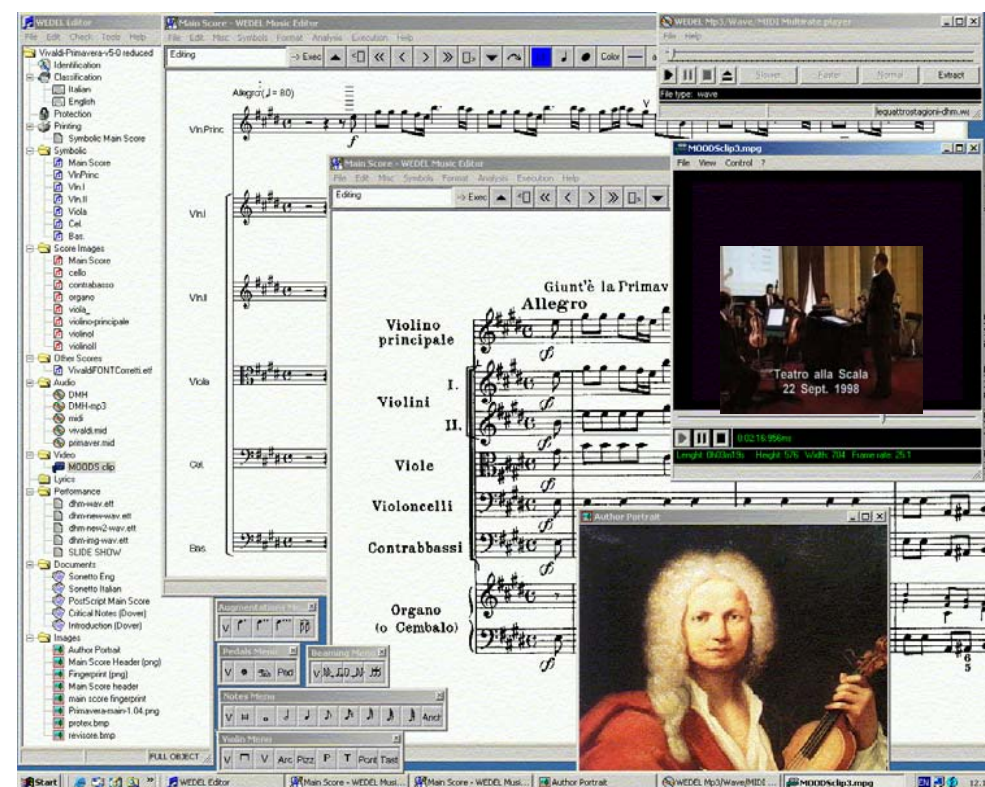

# The Coding Problem

**Interactive  
MusicNetwork  
Multimedia**

- **European Commission** established the MUSICNETWORK NOE chaired by University of Florence, Italy (2000)
- **Study and development** of international standard for music coding supporting different rendering and multimedia on the basis of several activities as:
  - WEDELMUSIC ICT project
  - MUSIC XML coding
  - BRAILLE XML coding
  - Finale coding
  - Sibelius coding
  - ...

# Symbolic Music Representation

- **MPEG SMR as MPEG-4 part 23**
- **WEDELMUSIC** format from EC project of European Commission

**W.A. Mozart - eine kleine nachtmusik**

**Violin I score**

**Violin I - video**

**Violin I**  
**Violin II**  
**Viola**  
**Violoncello**  
**Basso**

**Velocity**  
**Annotations**

# MPEG SMR as MPEG-4

## Distribution

- School Server
- Archive
- Distributor
- Producer
- ...

For music  
education  
at home,  
at school

For entertainment  
in theaters, archives,  
at home, at school

## Applications

Fruition  
Devices

ISO/IEC JTC1/SC29 WG11

MOVING PICTURE EXPERTS GROUP

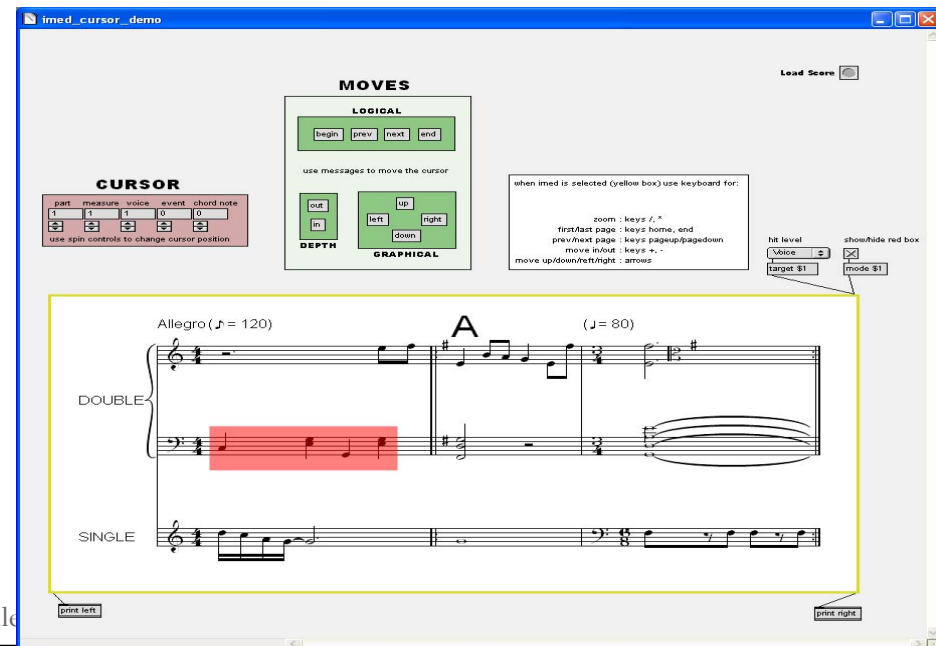

# Optical Music Recognition, OMR

- **I-Maestro project of the European Commission:**

<http://www.i-maestro.org>

- **OMR: generating Symbolic Music coding from music scores in different *paper based “visual” notations* to symbolic music representation coding!**
  - *Technologies developed:* Image and Video processing, augmented violin
- **Collaborative work for music teaching and learning, heterogeneous pupils**
  - *Technologies developed:* distributed systems, music coding, competitive work

# Transcoding Problem Challenge

- **Passing from** sounds (monophonic and polyphonic ) to a symbolic music representation coding via Signal Processing
  - *Technologies developed:* Polyphonic Transcoding, instrument independent....
  - *Developed algorithms: winner for piano* and in the firsts three for generic at the MIREX international research competition among algorithms for transcoding of polyphonic music

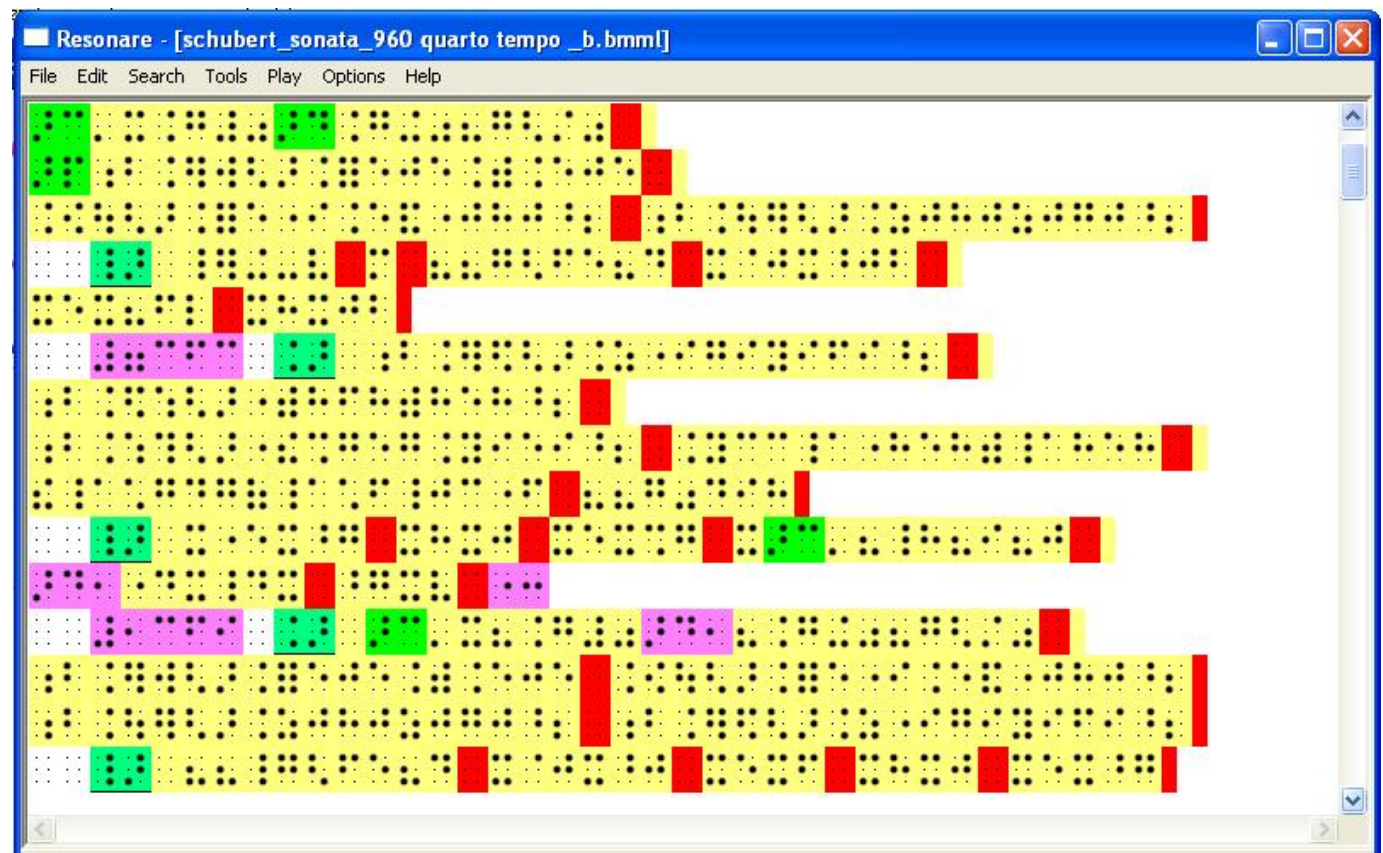

# BMML (Braille Music Markup Language)

- Aligned with MPEG SMR model
- **Contrapunctus EC project** to develop tools and to draw benefit from this new format
- **Resonare Tool** help to:

- navigate on notation, rendered on Braille devices
- memorize and understand
- personalize / bookmark
- play...

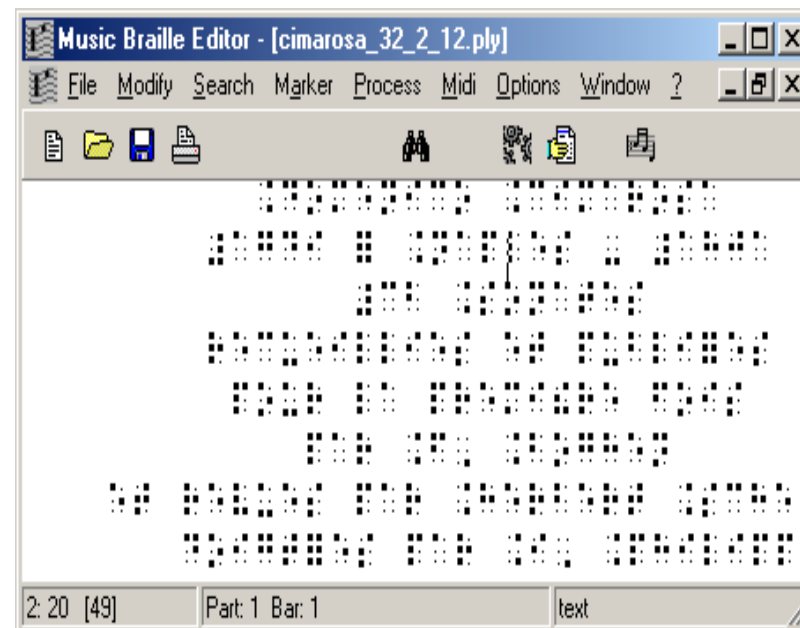

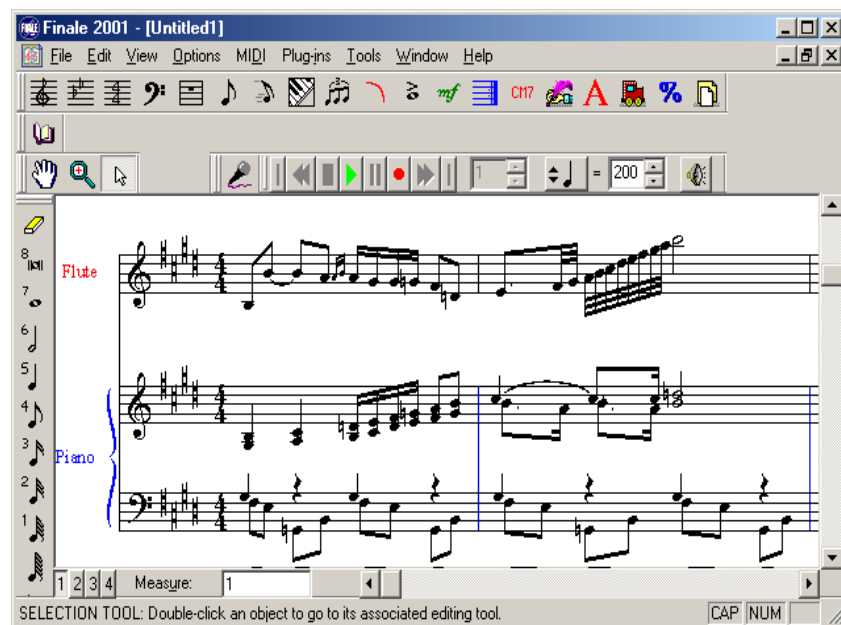

# Braille Music Markup Language and tools

The **Contrapunctus** multidisciplinary team produced:

- conversion modules (back and forward), aimed at facilitating access to existing music in digital formats

# ECLAP performing arts European Library

Services

# ECLAP is a best practice collaborative network on performing arts:

- distributing over 90 thousand content objects
- 35 prestigious European institutions,
- Traditional music, Braille Music, video, audio, etc.
- Access via PC and mobile devices.

# Conclusions & Future Work

- **Research activity** on MUSICNETWORK, WEDELMUSIC, IMUTUS, CONTRAPUNTUS, MIREX R&D projects opened the doors to social inclusion, thus reducing not only technological barriers, but also cultural ones.
- **Enabling technologies** such music coding and signal processing, etc., allowed to create specific Braille coding models and new tools, thus:
  - reducing the gap for accessing to music,
  - Increasing the access to music for visually impaired
  - increasing the amount of accessible music
  - Increasing the number of possible tools for producing correctly coded music
- **New generation of solutions and tools** has been provoked by MPEG SMR work
- **Additional work is needed on:**
  - Collaborative tools for music training and composition, annotations
  - Making MPEG SMR & BMML more accessible on multiple devices
- .....
